

A study of the integrated luminosity
dependence of the F_L and F_2
measurement in $e+Au$ collisions at
eRHIC

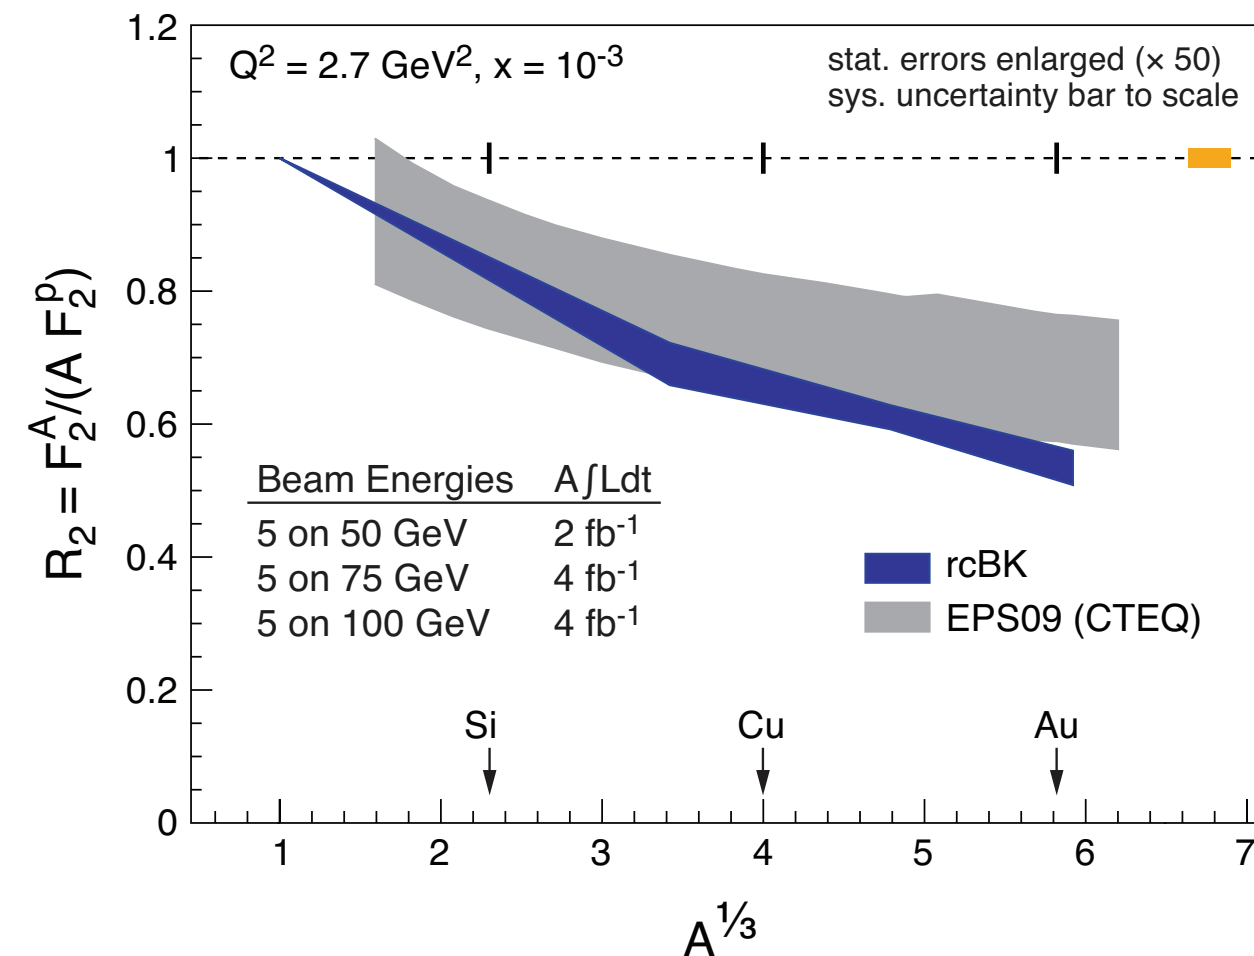

Matthew A. C. Lamont
BNL

Background to the presentation

- Three different energies run for each stage
 - 5(20)x50
 - 5(20)x75
 - 5(20)x100
- The total integrated luminosity is divided 20/40/40 amongst the energies due to running time.
 - i.e. 10 fb⁻¹
 - 5(20)x50: 2 fb⁻¹
 - 5(20)x75: 4 fb⁻¹
 - 5(20)x100: fb⁻¹
- This of course could be changed but I don't think it would have a large effect on the conclusions
- Where systematic errors are included, a 3% uncertainty is added in quadrature with the statistical uncertainty

White paper plot:

- Ratio of $F_2(F_L)$ in A to $F_2(F_L)$ in p .
- No actual values of $F_2(F_L)$ shown here, just error bars.
- Stat errors are tiny (scaled to be made visible), systematic uncertainties are to scale

Reduced Cross-sections: $A\int L dt = 10 \text{ fb}^{-1}$

Reduced Cross-sections: $A\int L dt = 10 \text{ fb}^{-1}$

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

HERA data on F_2 :

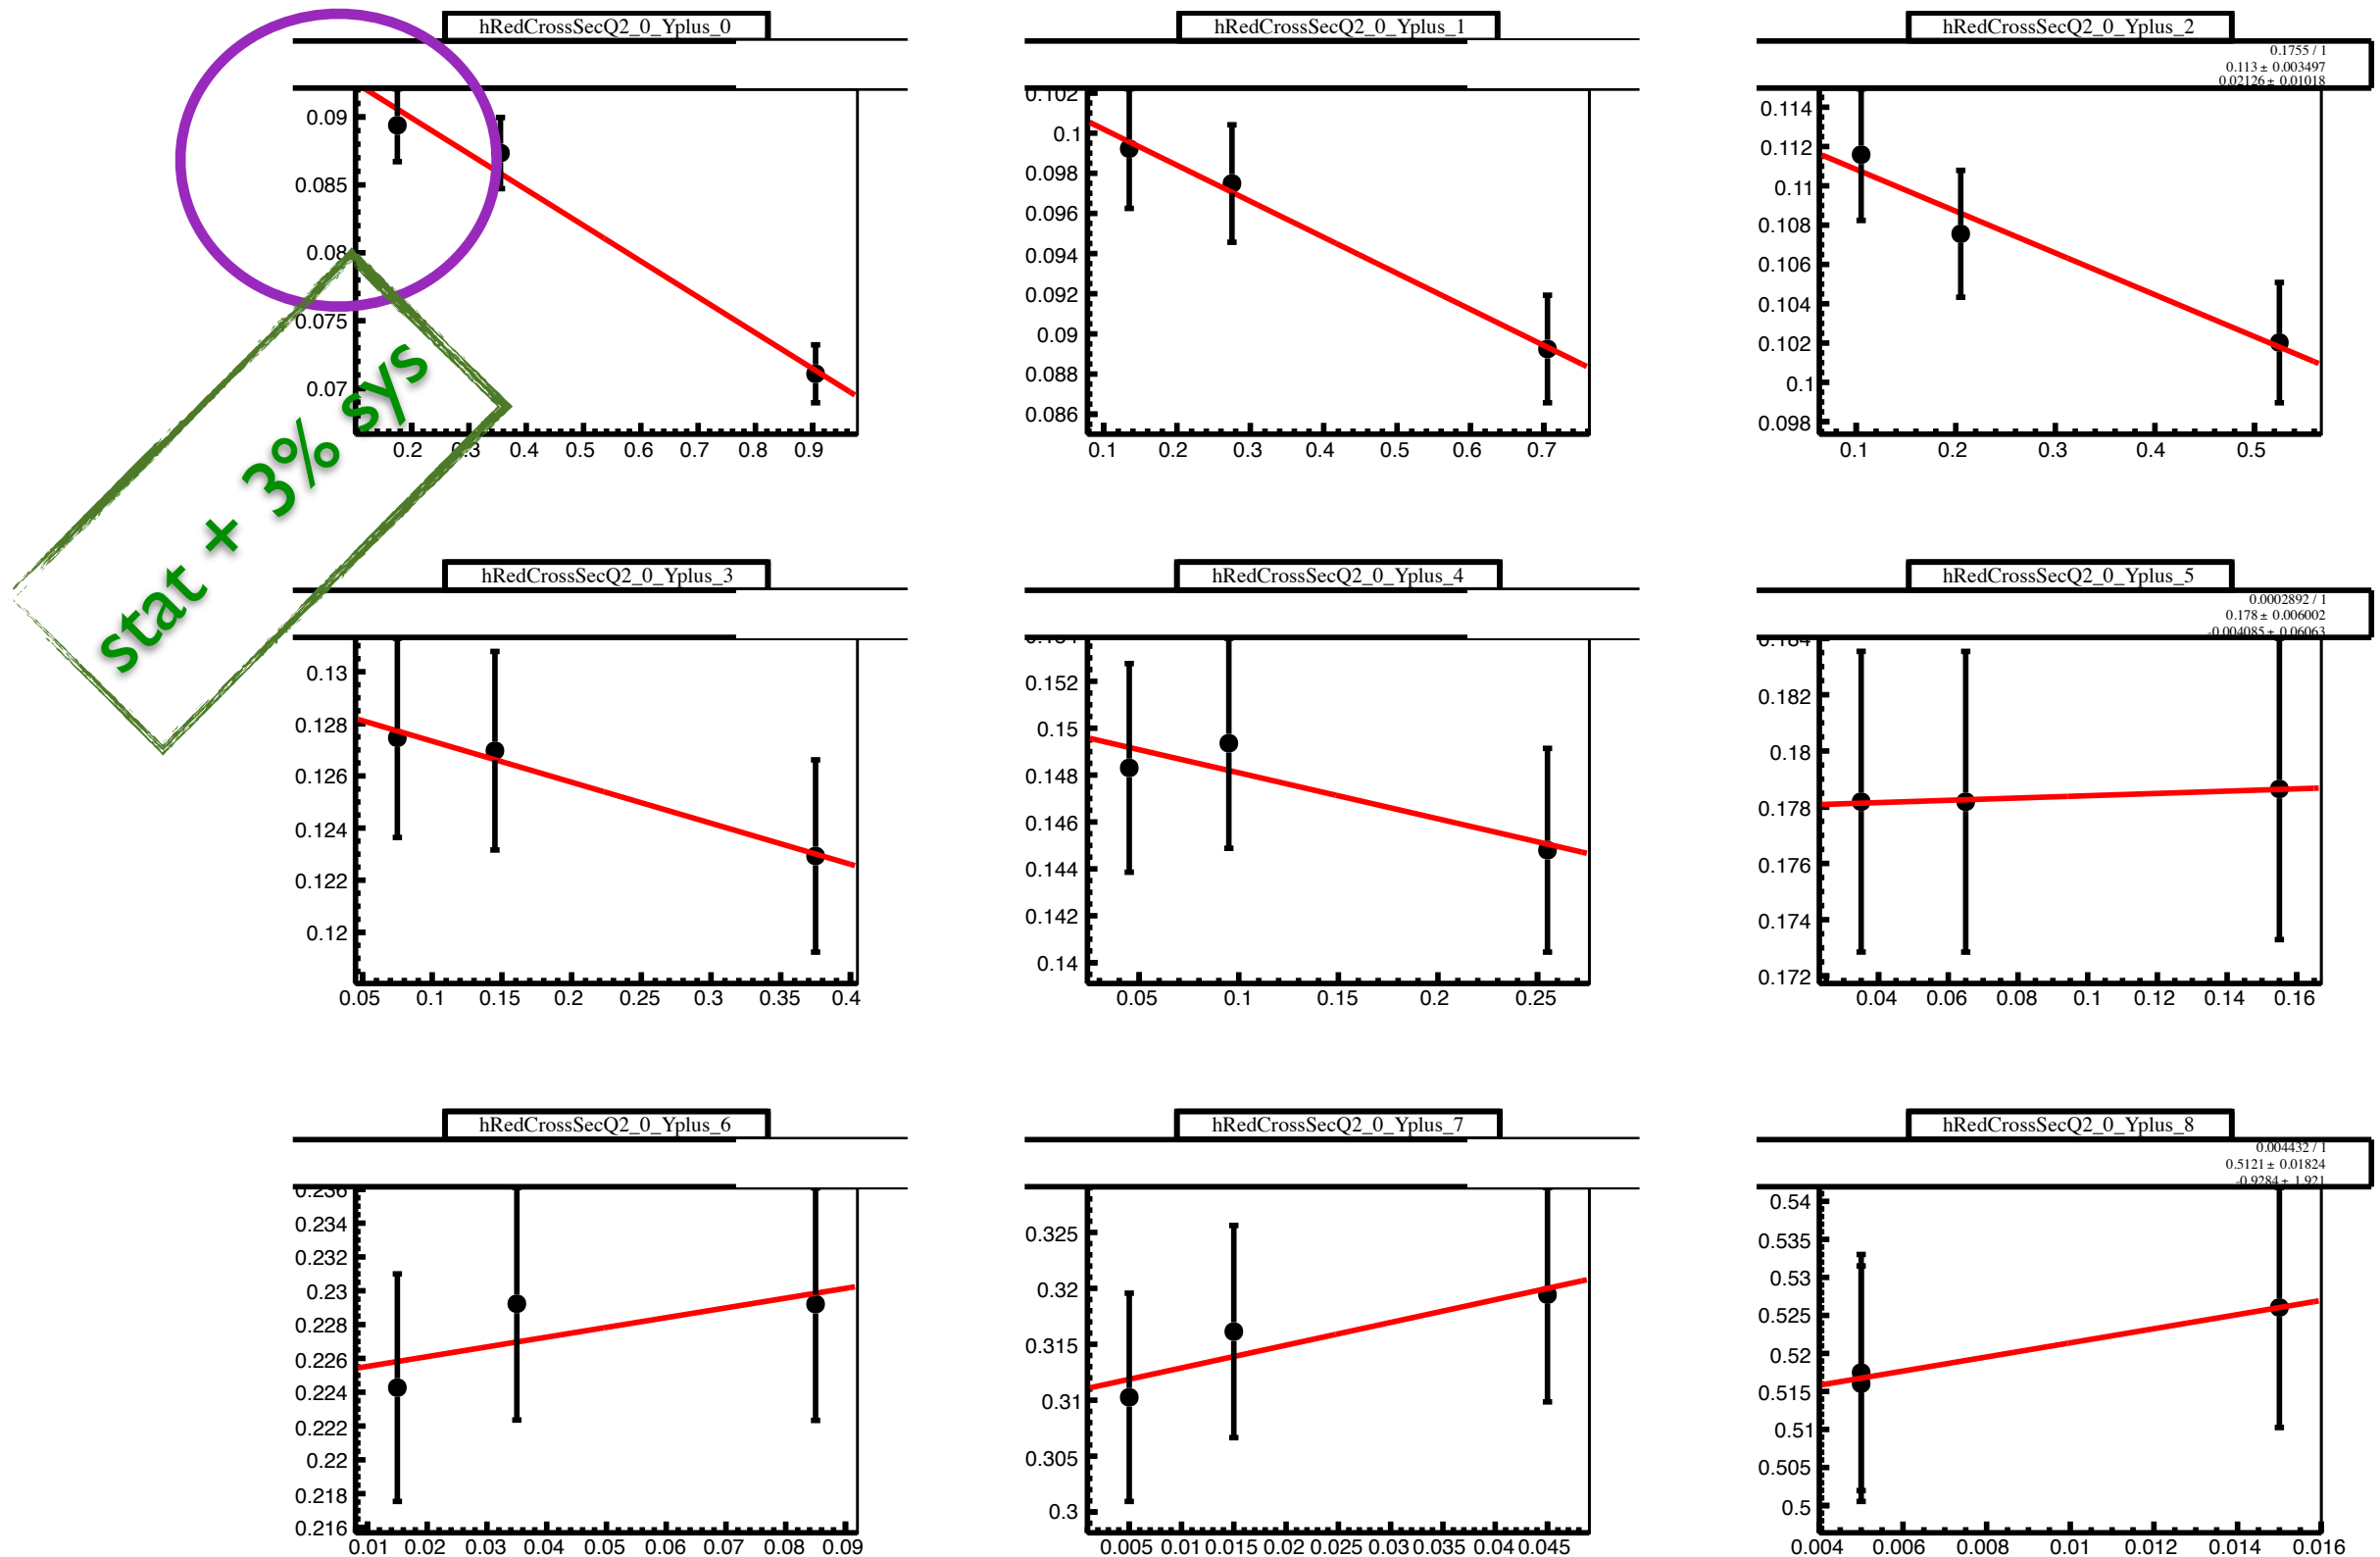

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

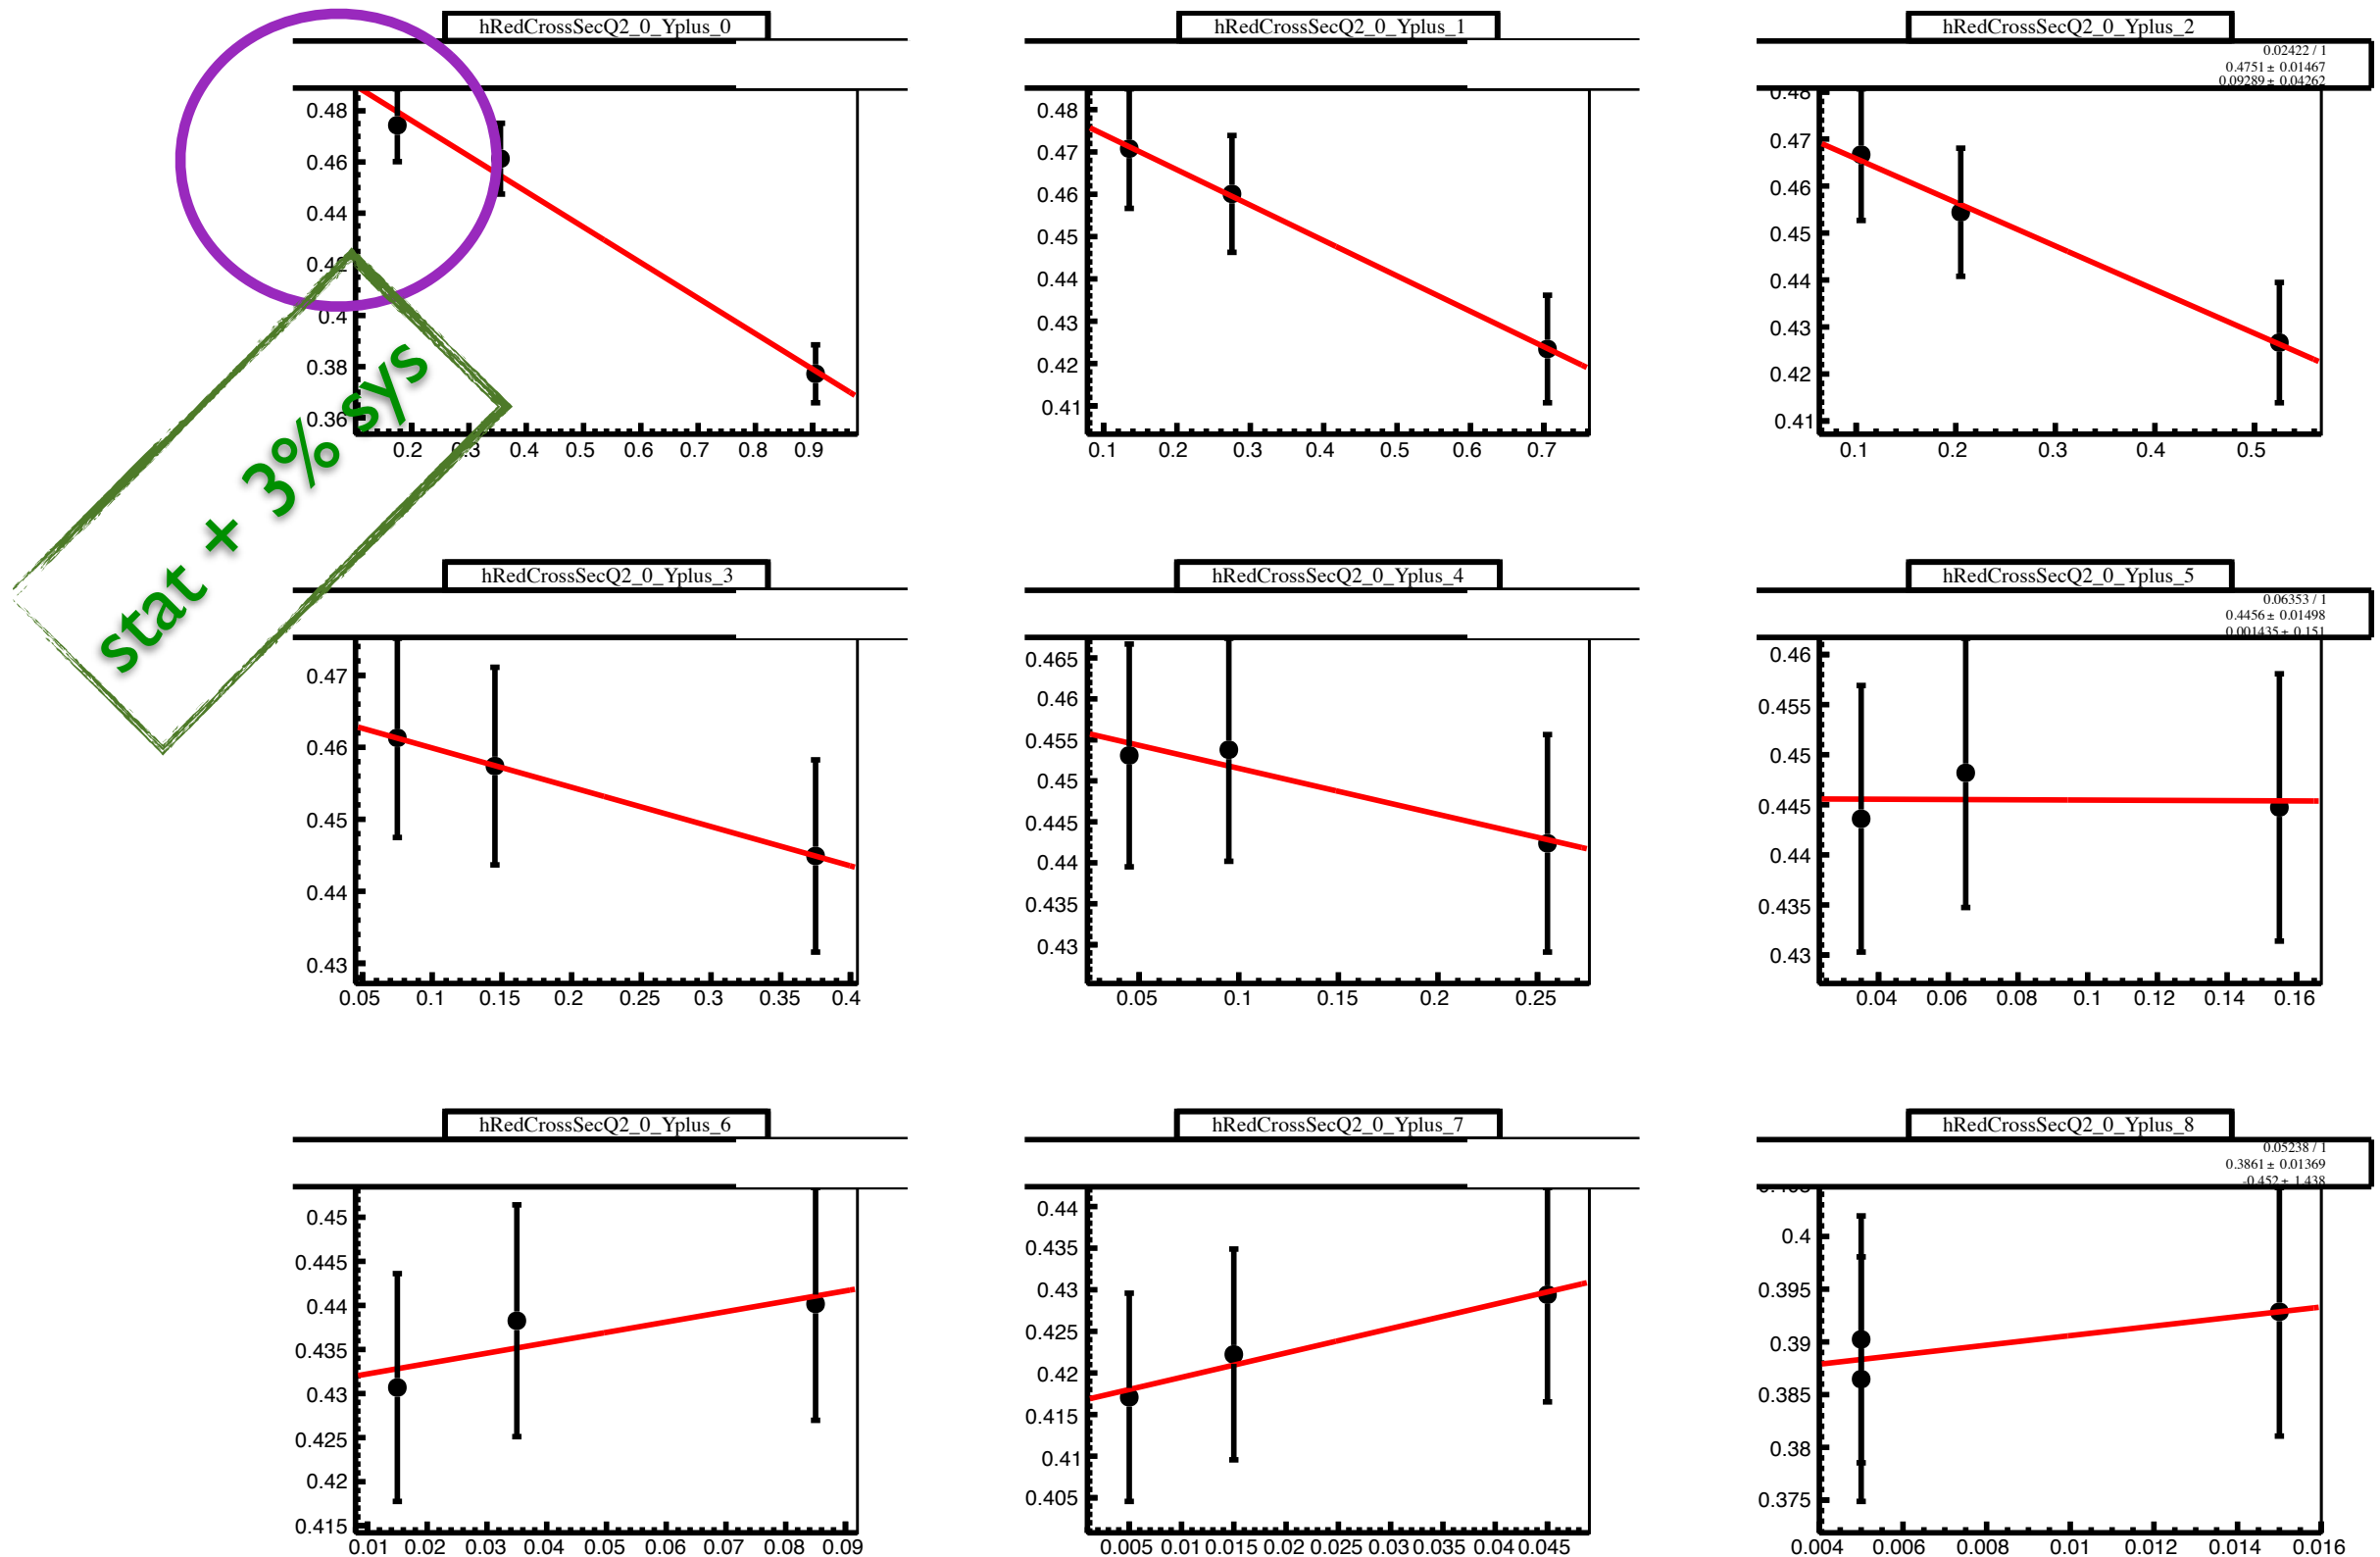

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

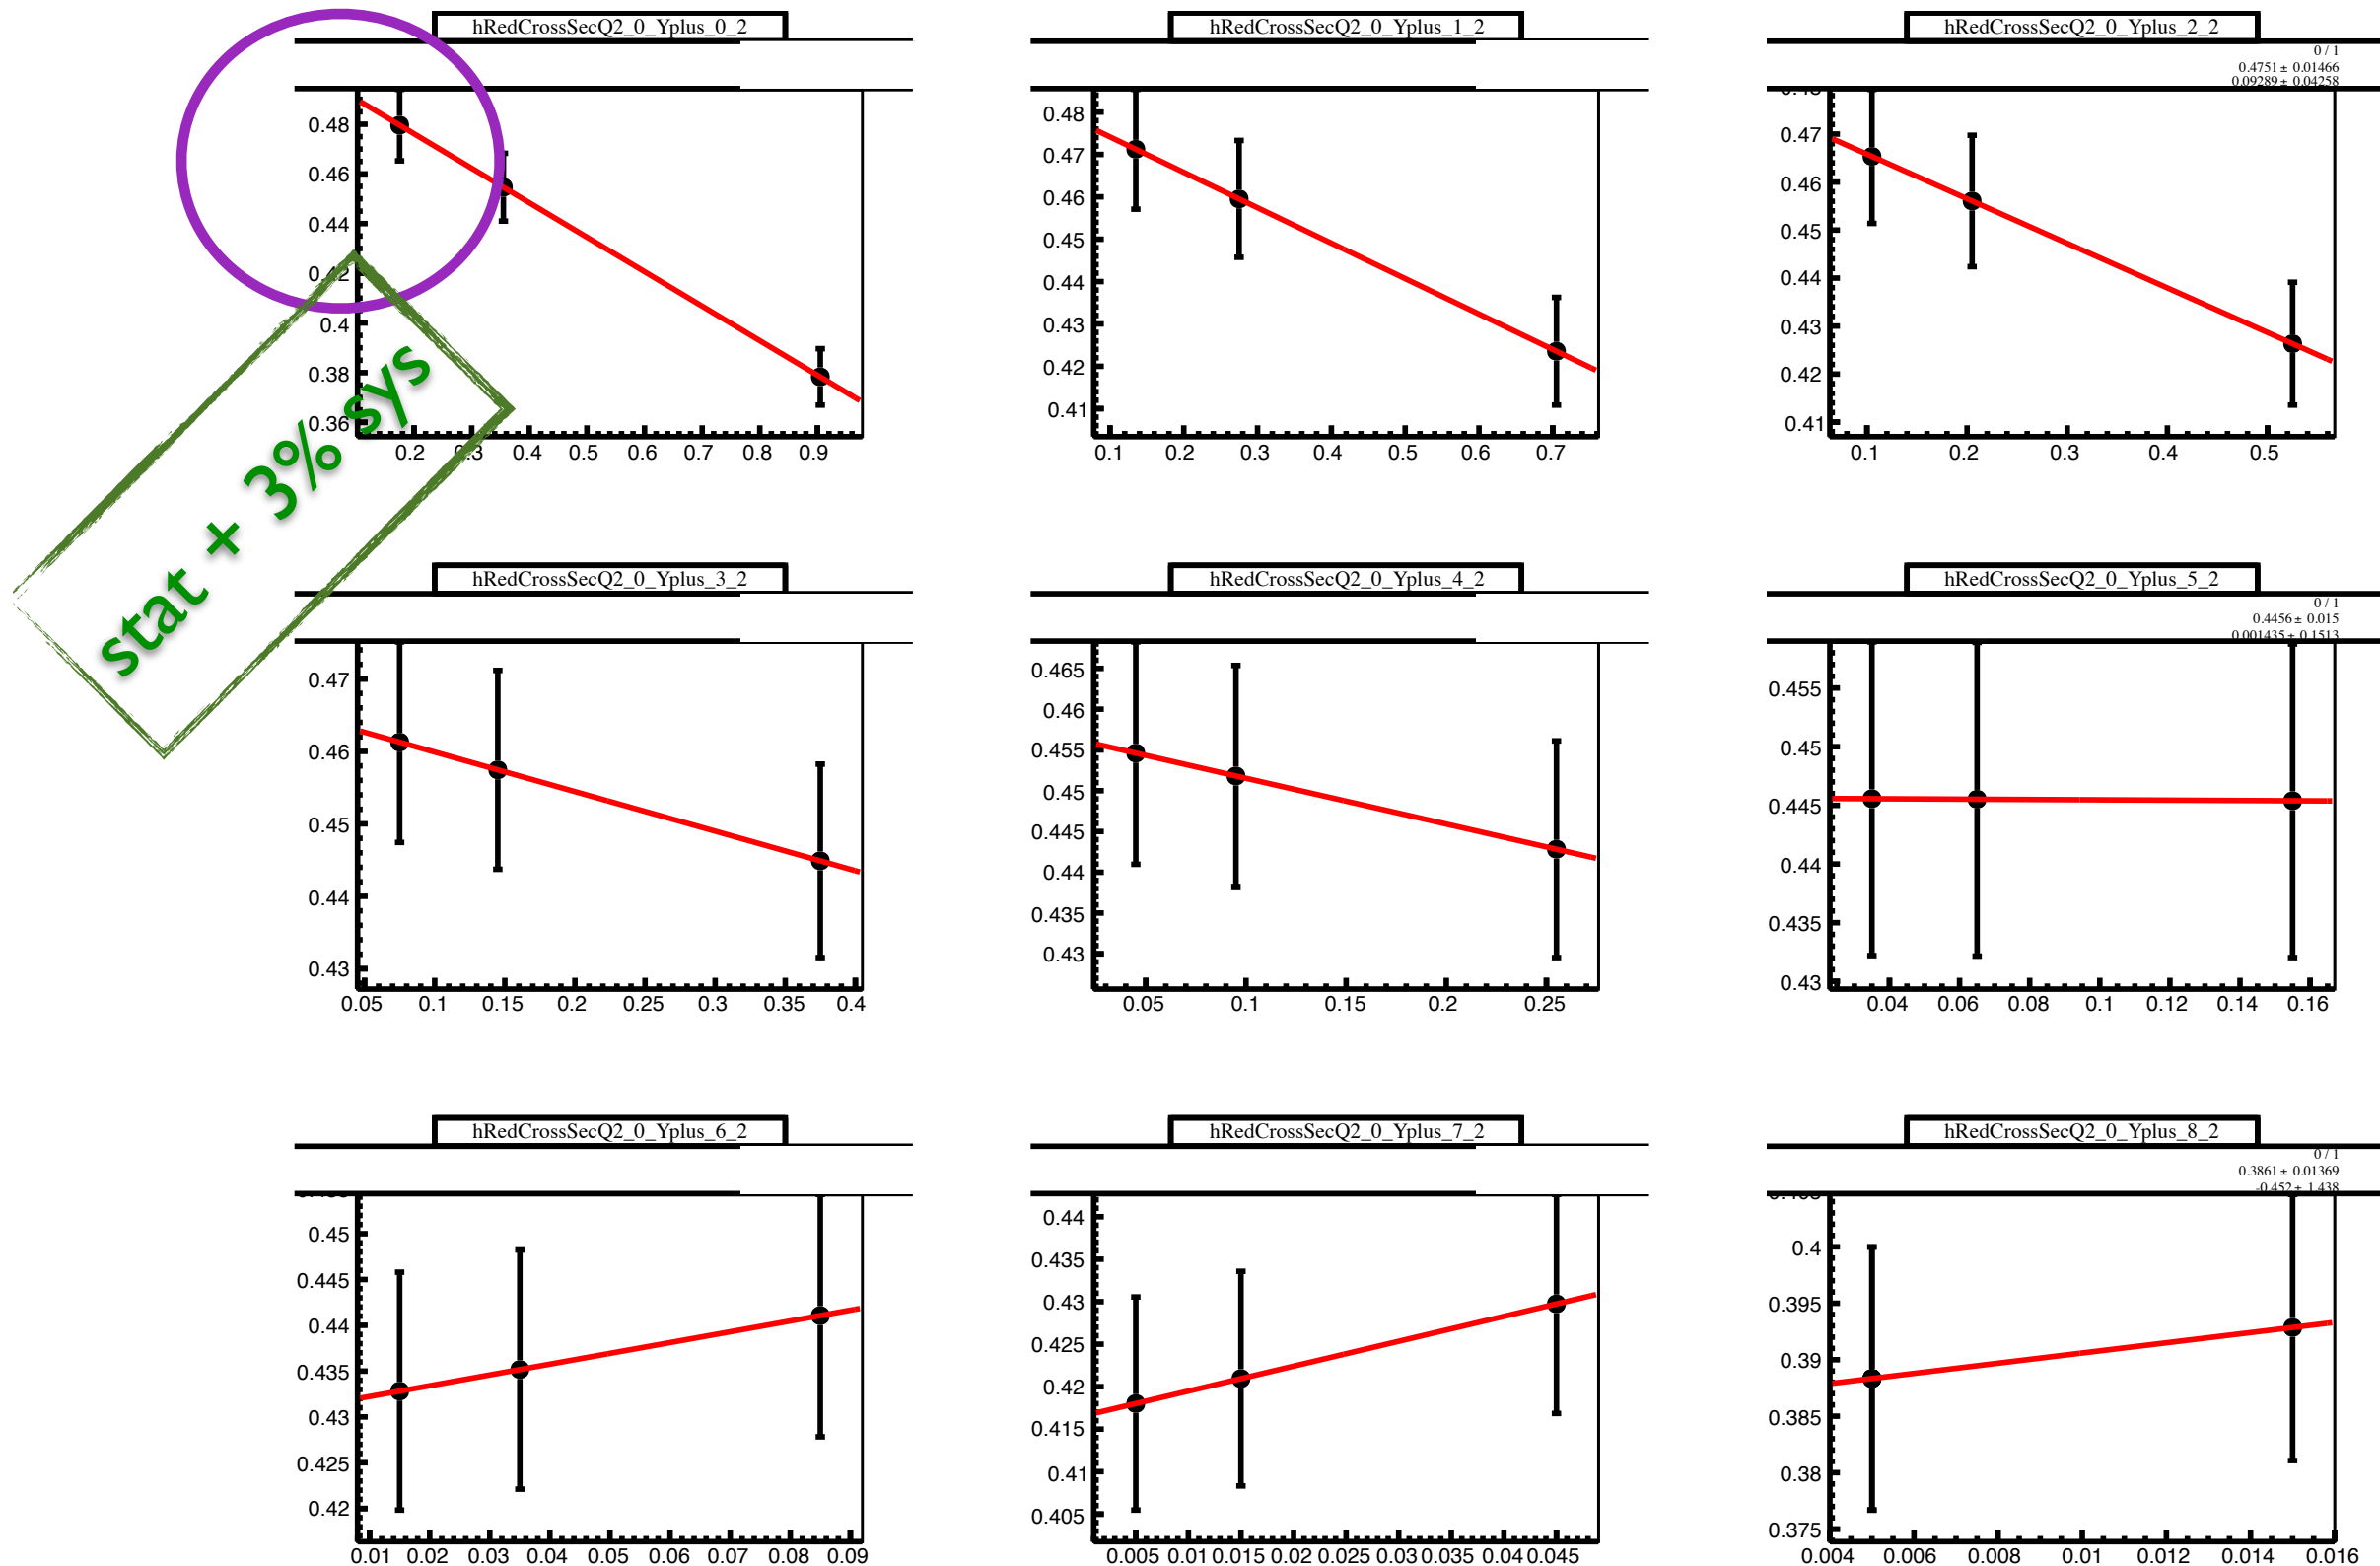

Reduced Cross-sections: $A\int L dt = 10 \text{ fb}^{-1}$

Reduced Cross-sections: $A\int L dt = 10 \text{ fb}^{-1}$

Reduced Cross-sections: $A\int L dt = 10 \text{ fb}^{-1}$

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

What was wrong?

- Cross-section requires knowledge of “ dx ”
- I was binning in y and my transform to x had a mistake.
- This mistake was also in the cross-sections that Hannu was fitting but as he was fitting a ratio, these cancel....

- Q) Do we need luminosities of 10^{34} ?
- Q) Can we perform F_2 and F_L measurements with integrated luminosities of $< 10 \text{ fb}^{-1}$?
 - How many bins in F_L can we measure?
 - How do we do in comparison to HERA's F_L measurement?

F_L in HERA

$E_p = 920 \text{ GeV}$ ($Q^2 > 8 \text{ GeV}^2$): 97 pb^{-1}

$E_p = 920 \text{ GeV}$ ($Q^2 < 8 \text{ GeV}^2$): 5.9 pb^{-1}

$E_p = 575 \text{ GeV}$: 4.9 pb^{-1}

$E_p = 46 \text{ GeV}$: 12.2 pb^{-1}

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 10 \text{ fb}^{-1}$

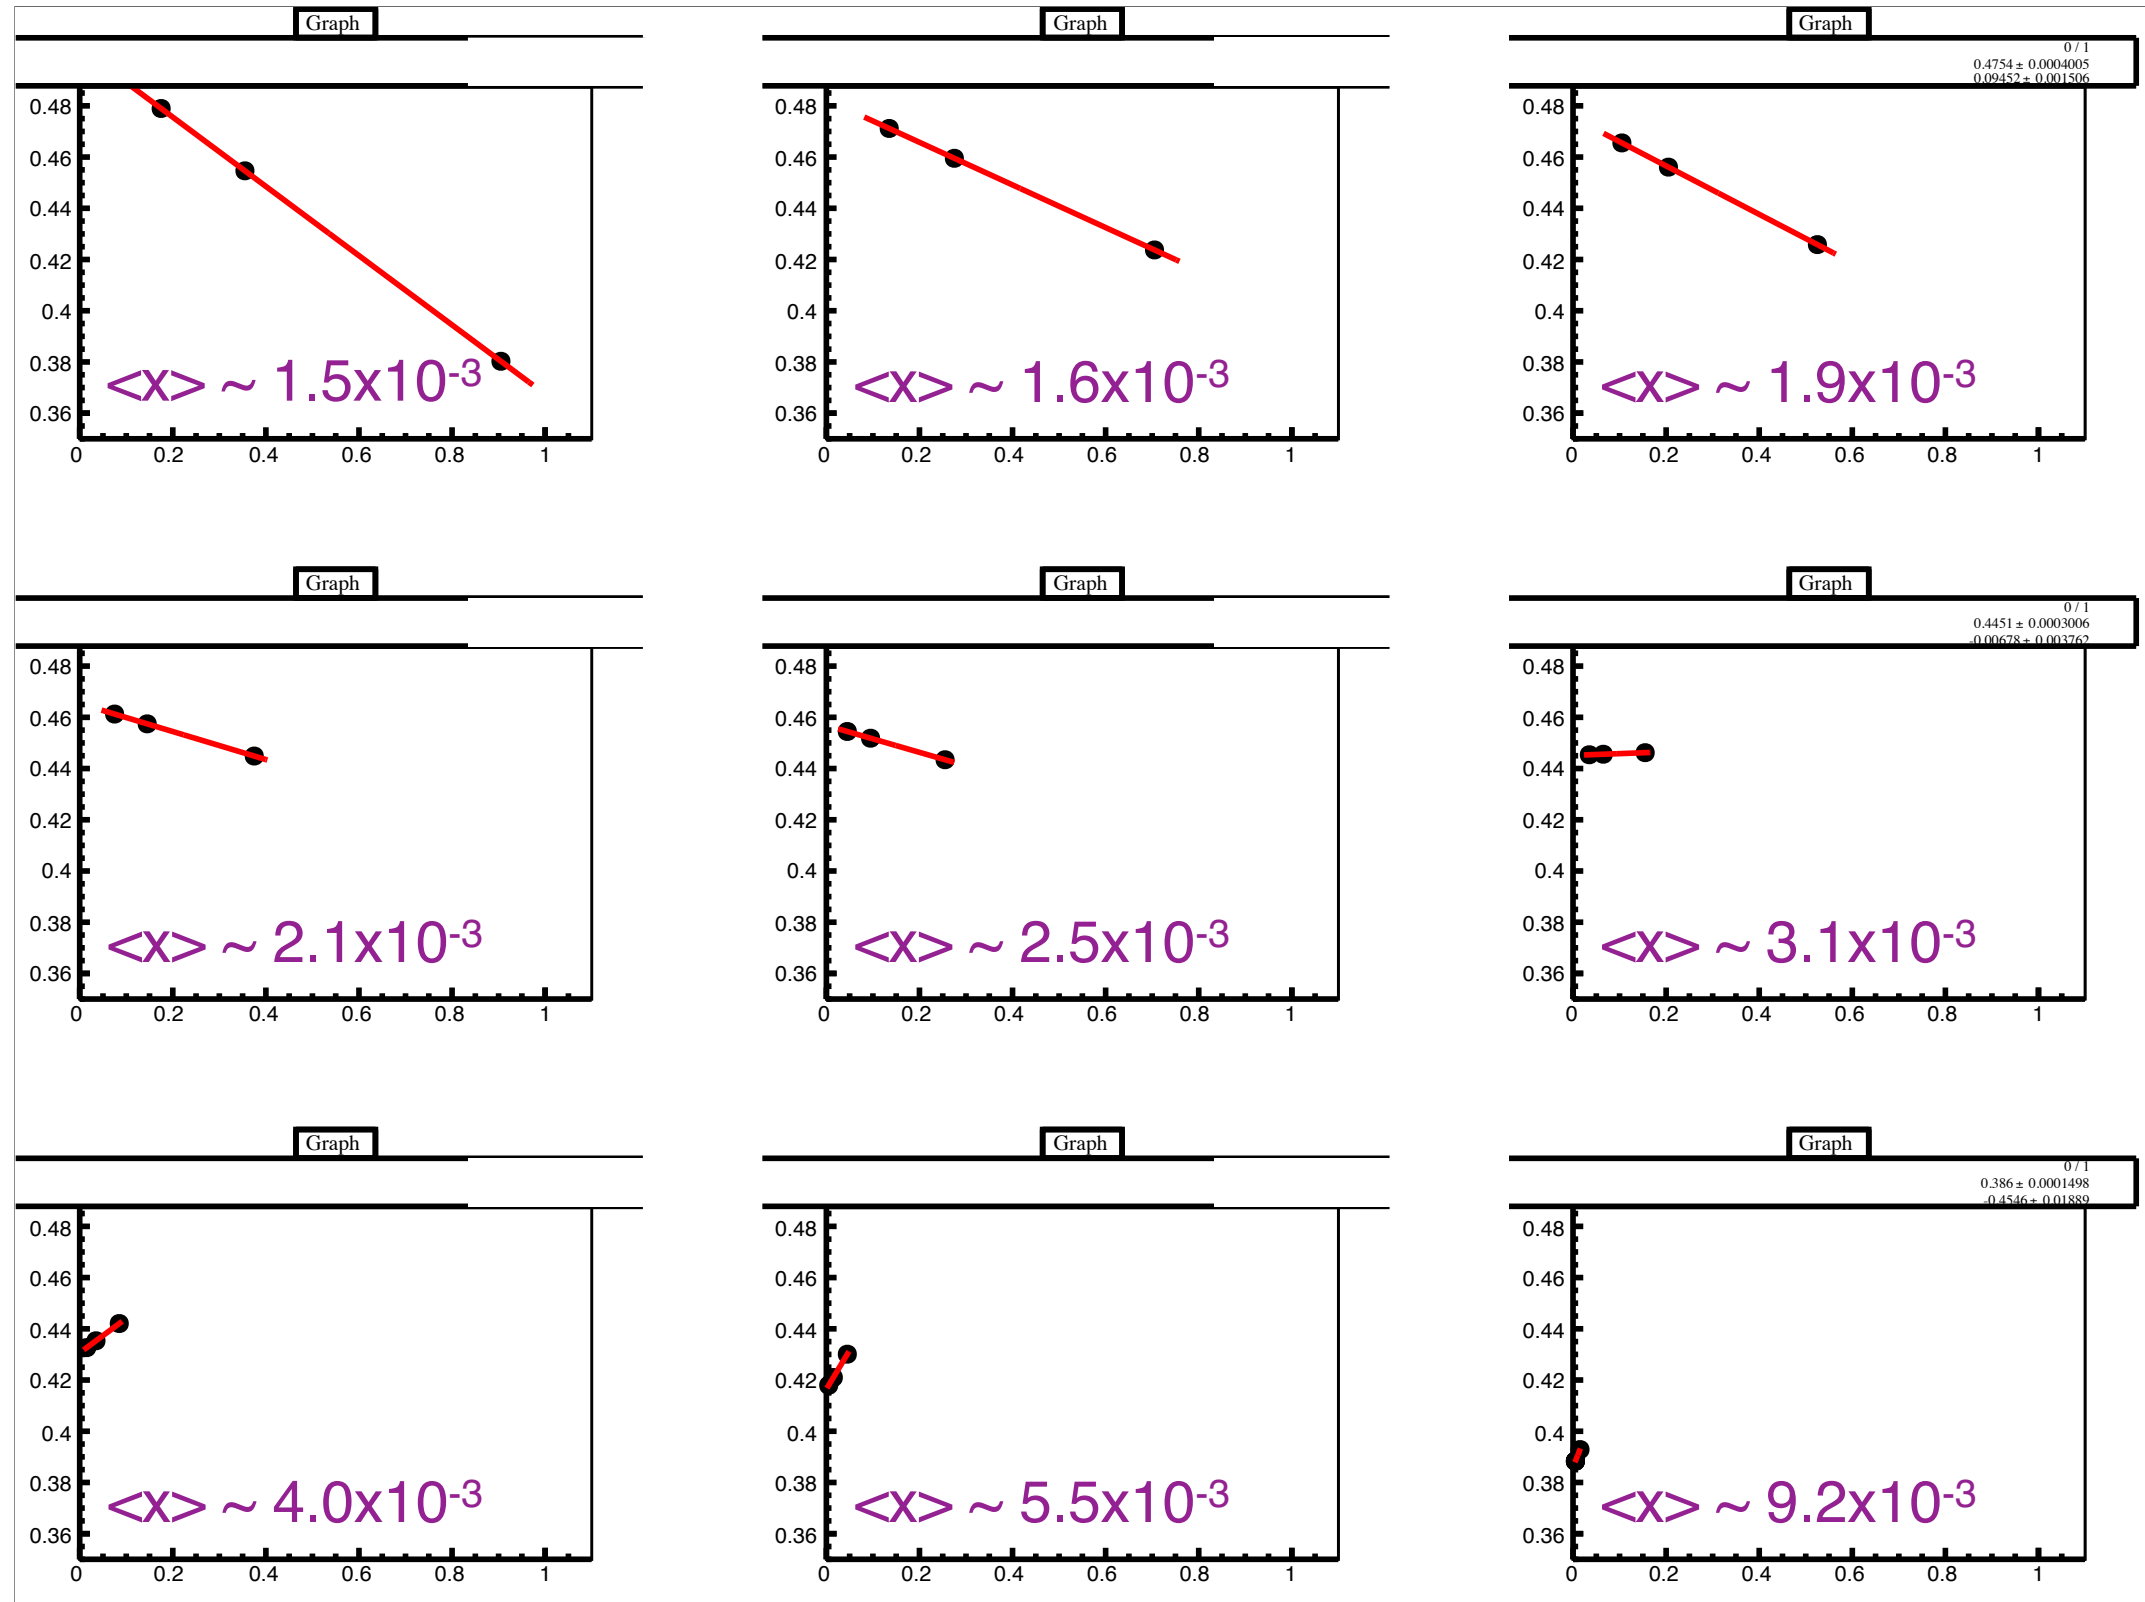

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 10 \text{ fb}^{-1}$

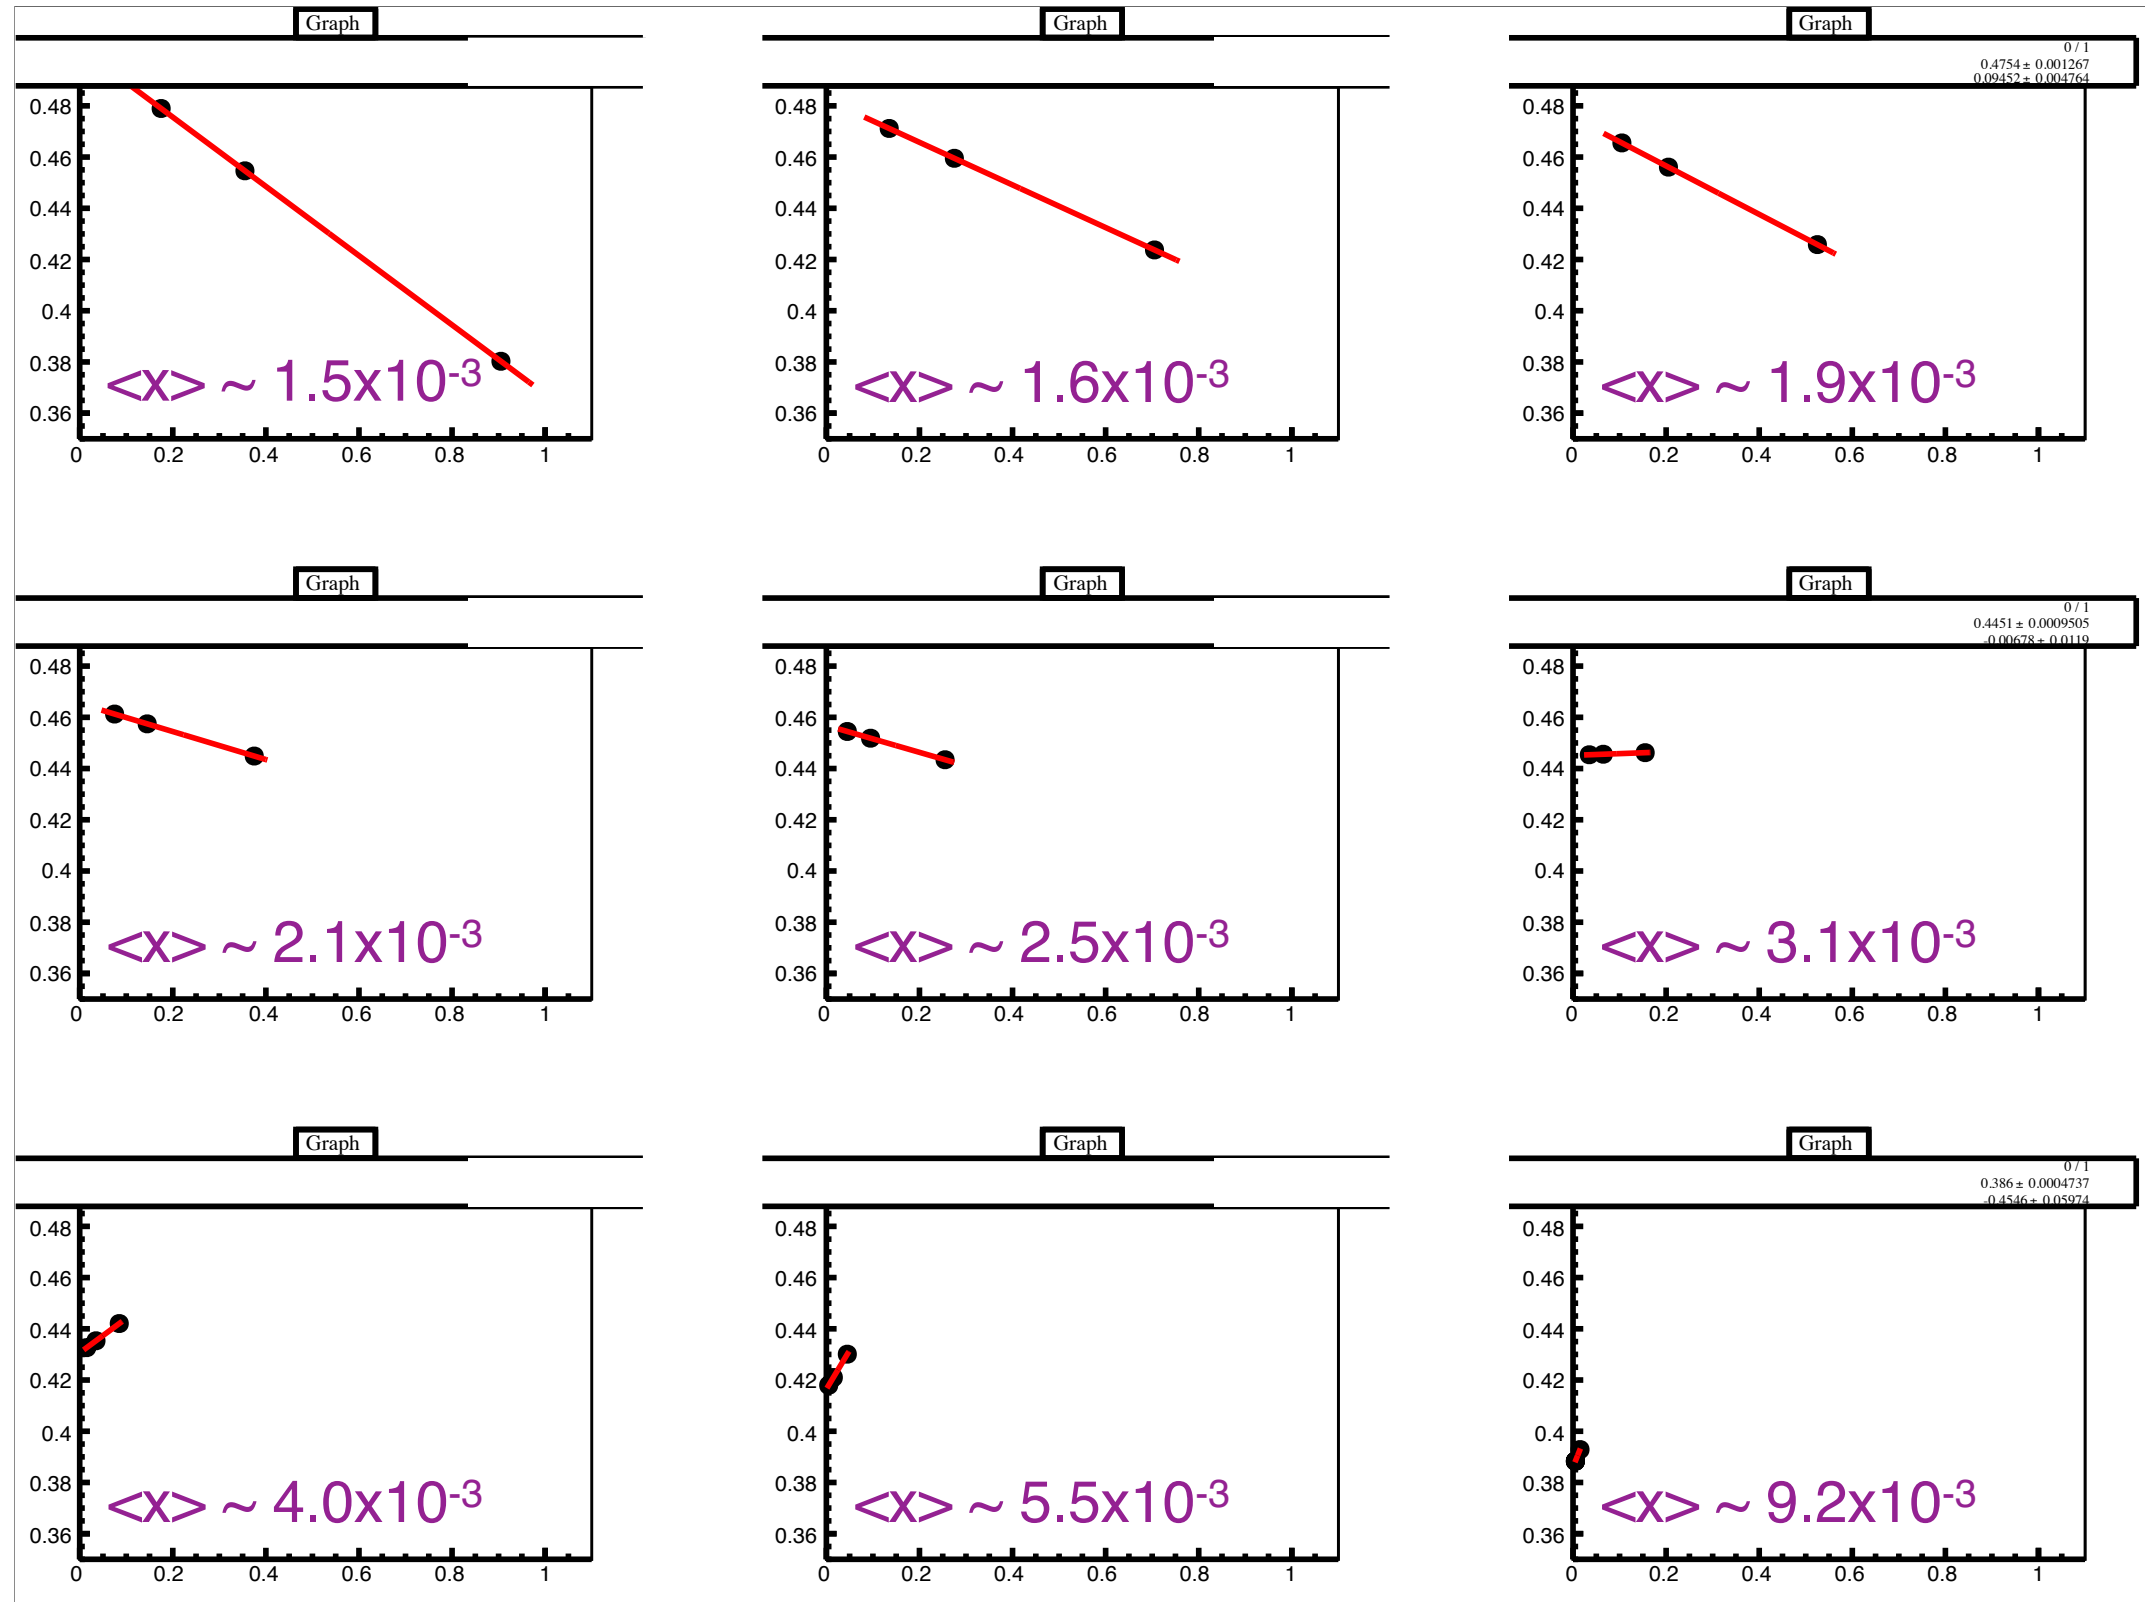

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 10 \text{ fb}^{-1}$

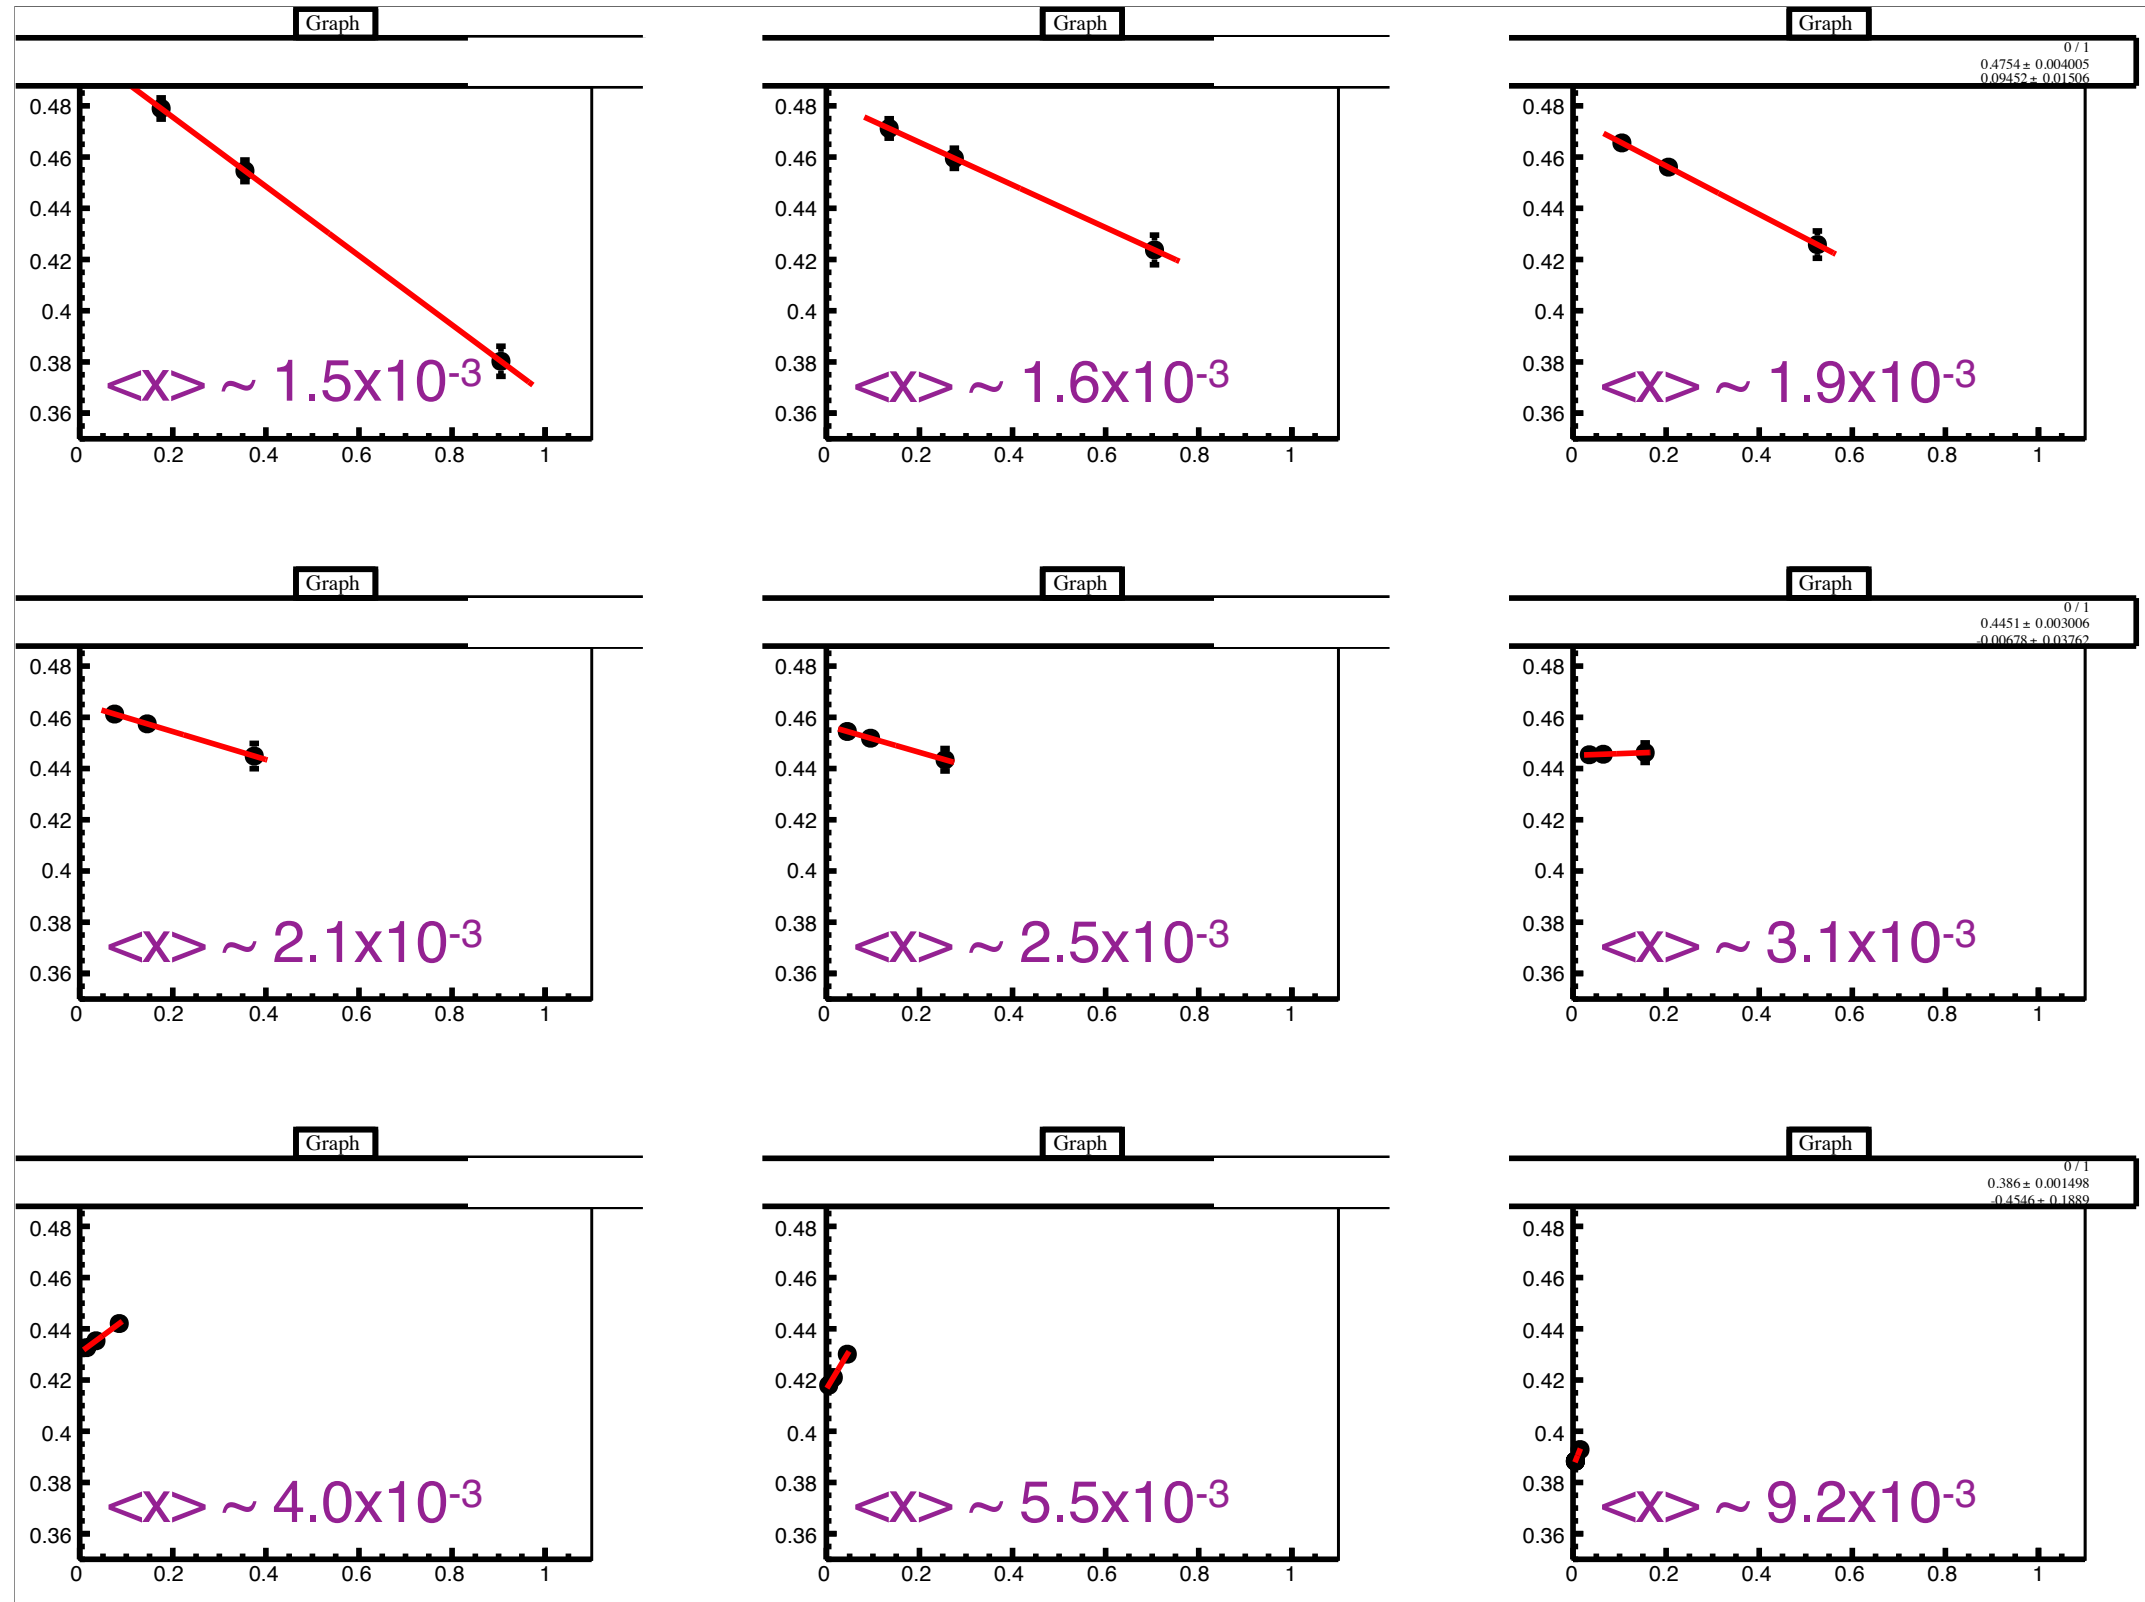

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 1 \text{ fb}^{-1}$

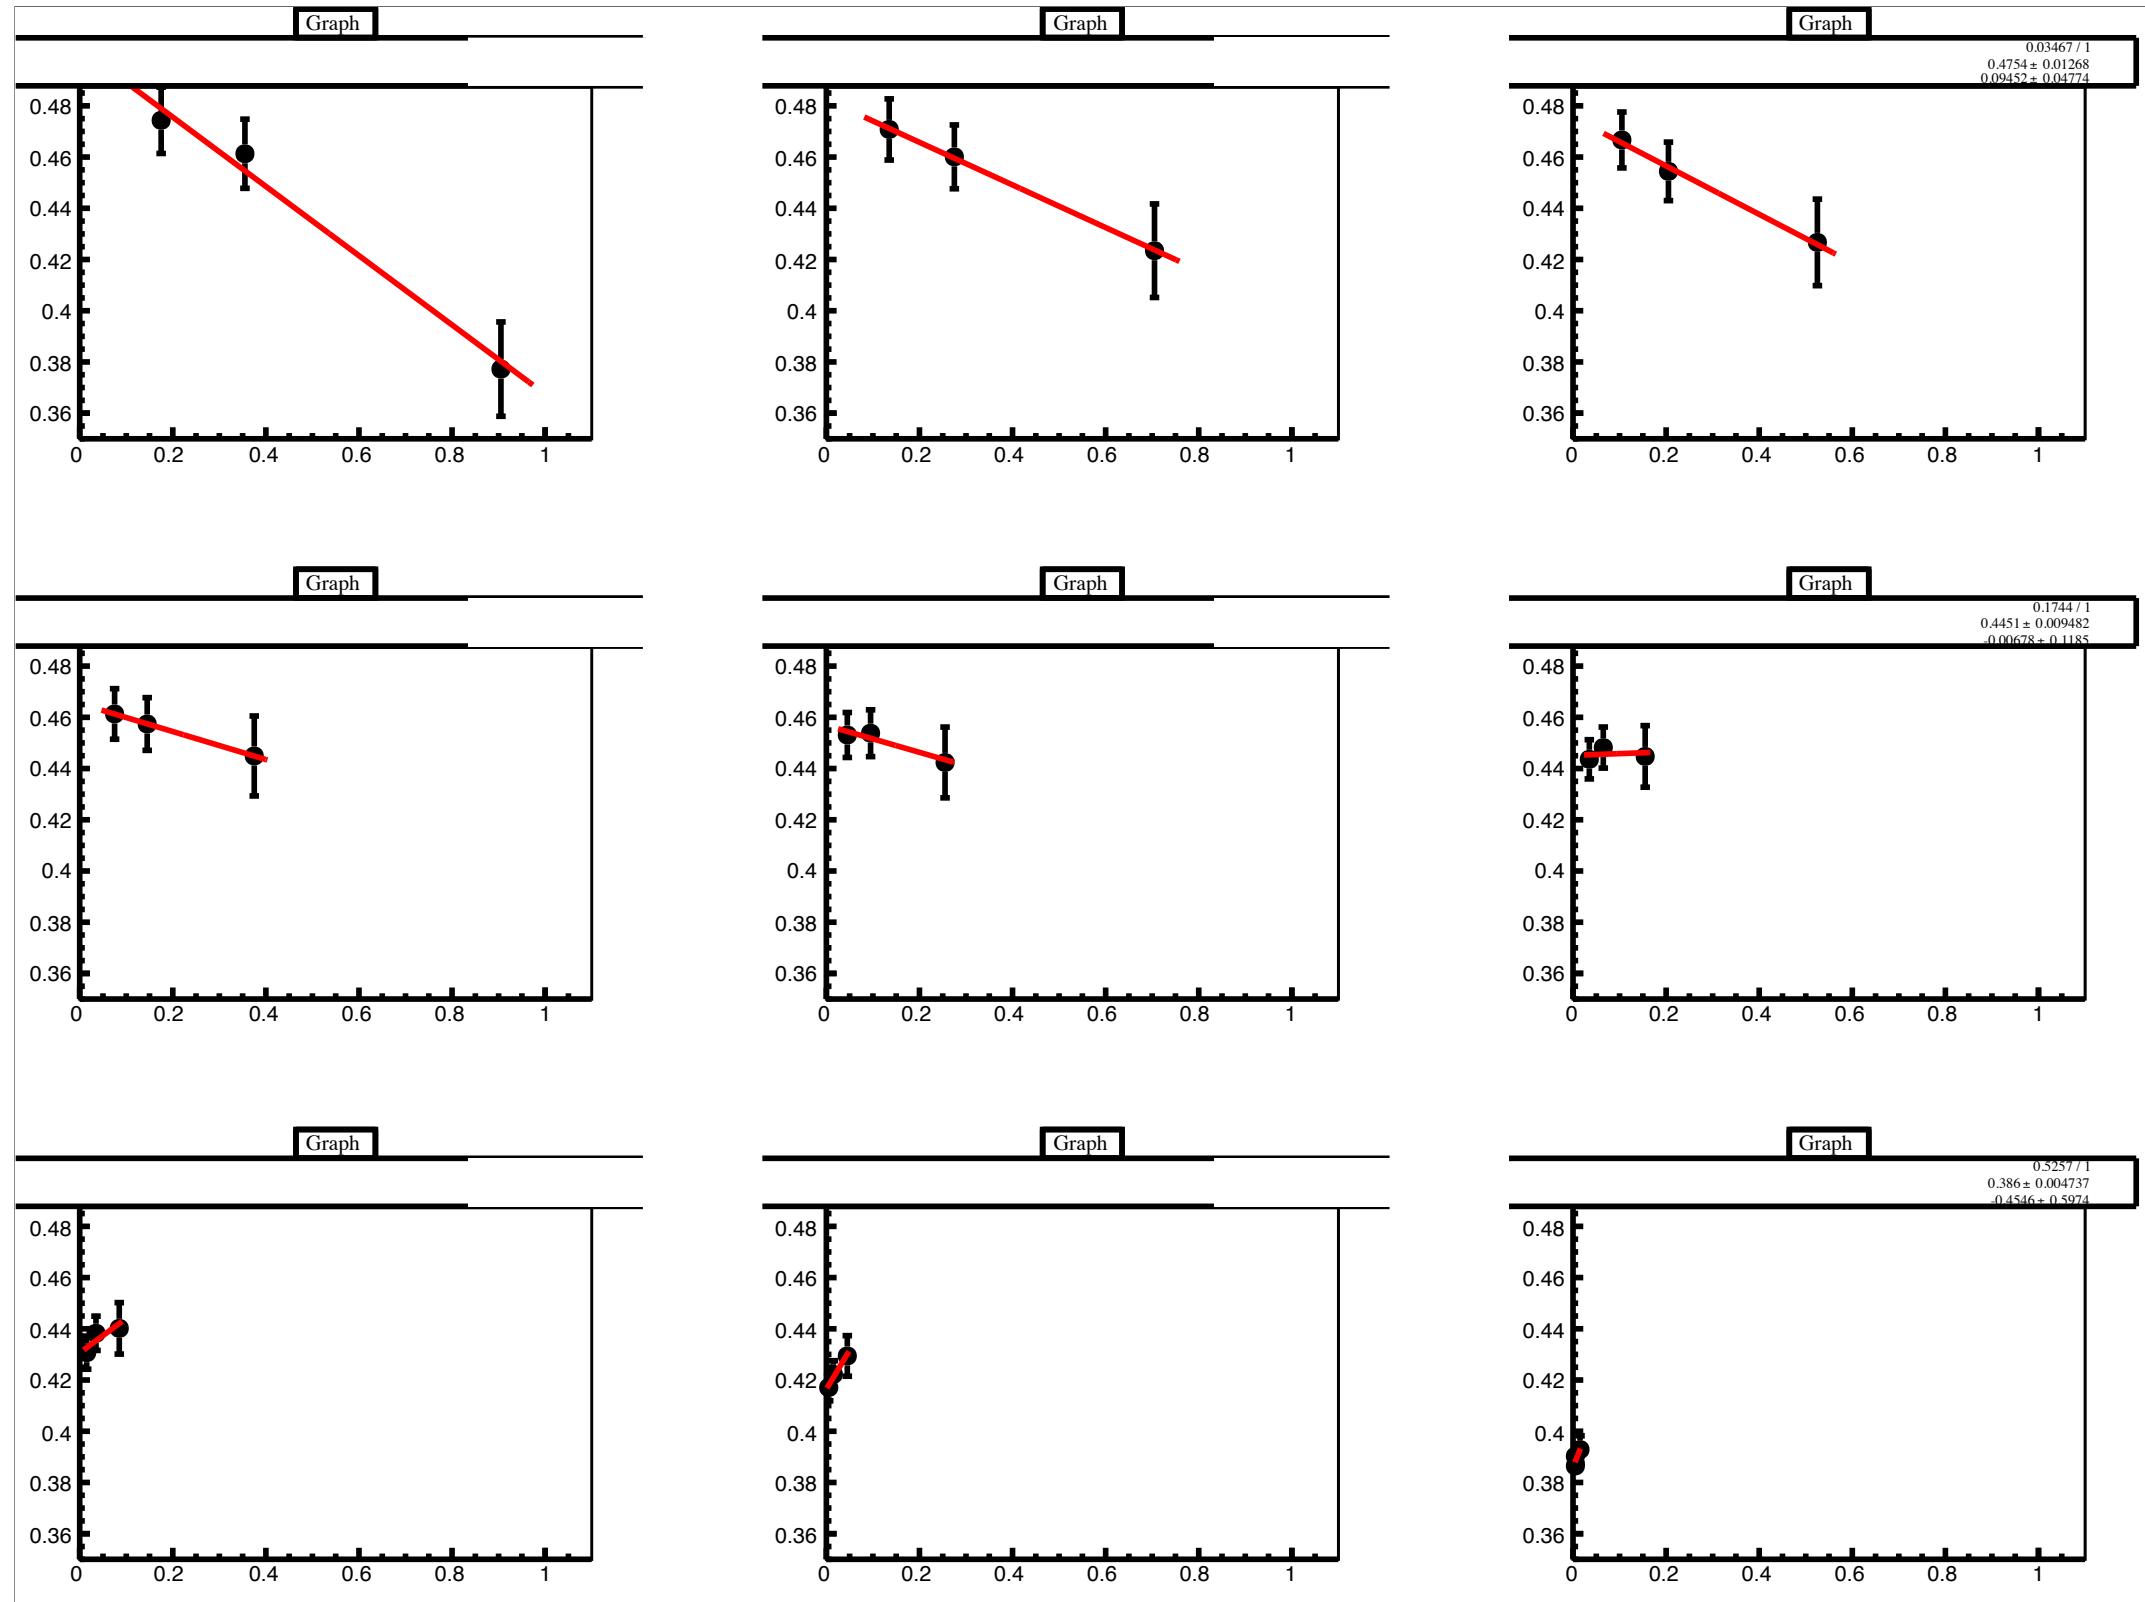

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 100 \text{ pb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 10 \text{ pb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 1 \text{ pb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 1 \text{ pb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 1 \text{ pb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 1 \text{ pb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections: $A \int L dt = 10 \text{ fb}^{-1}$

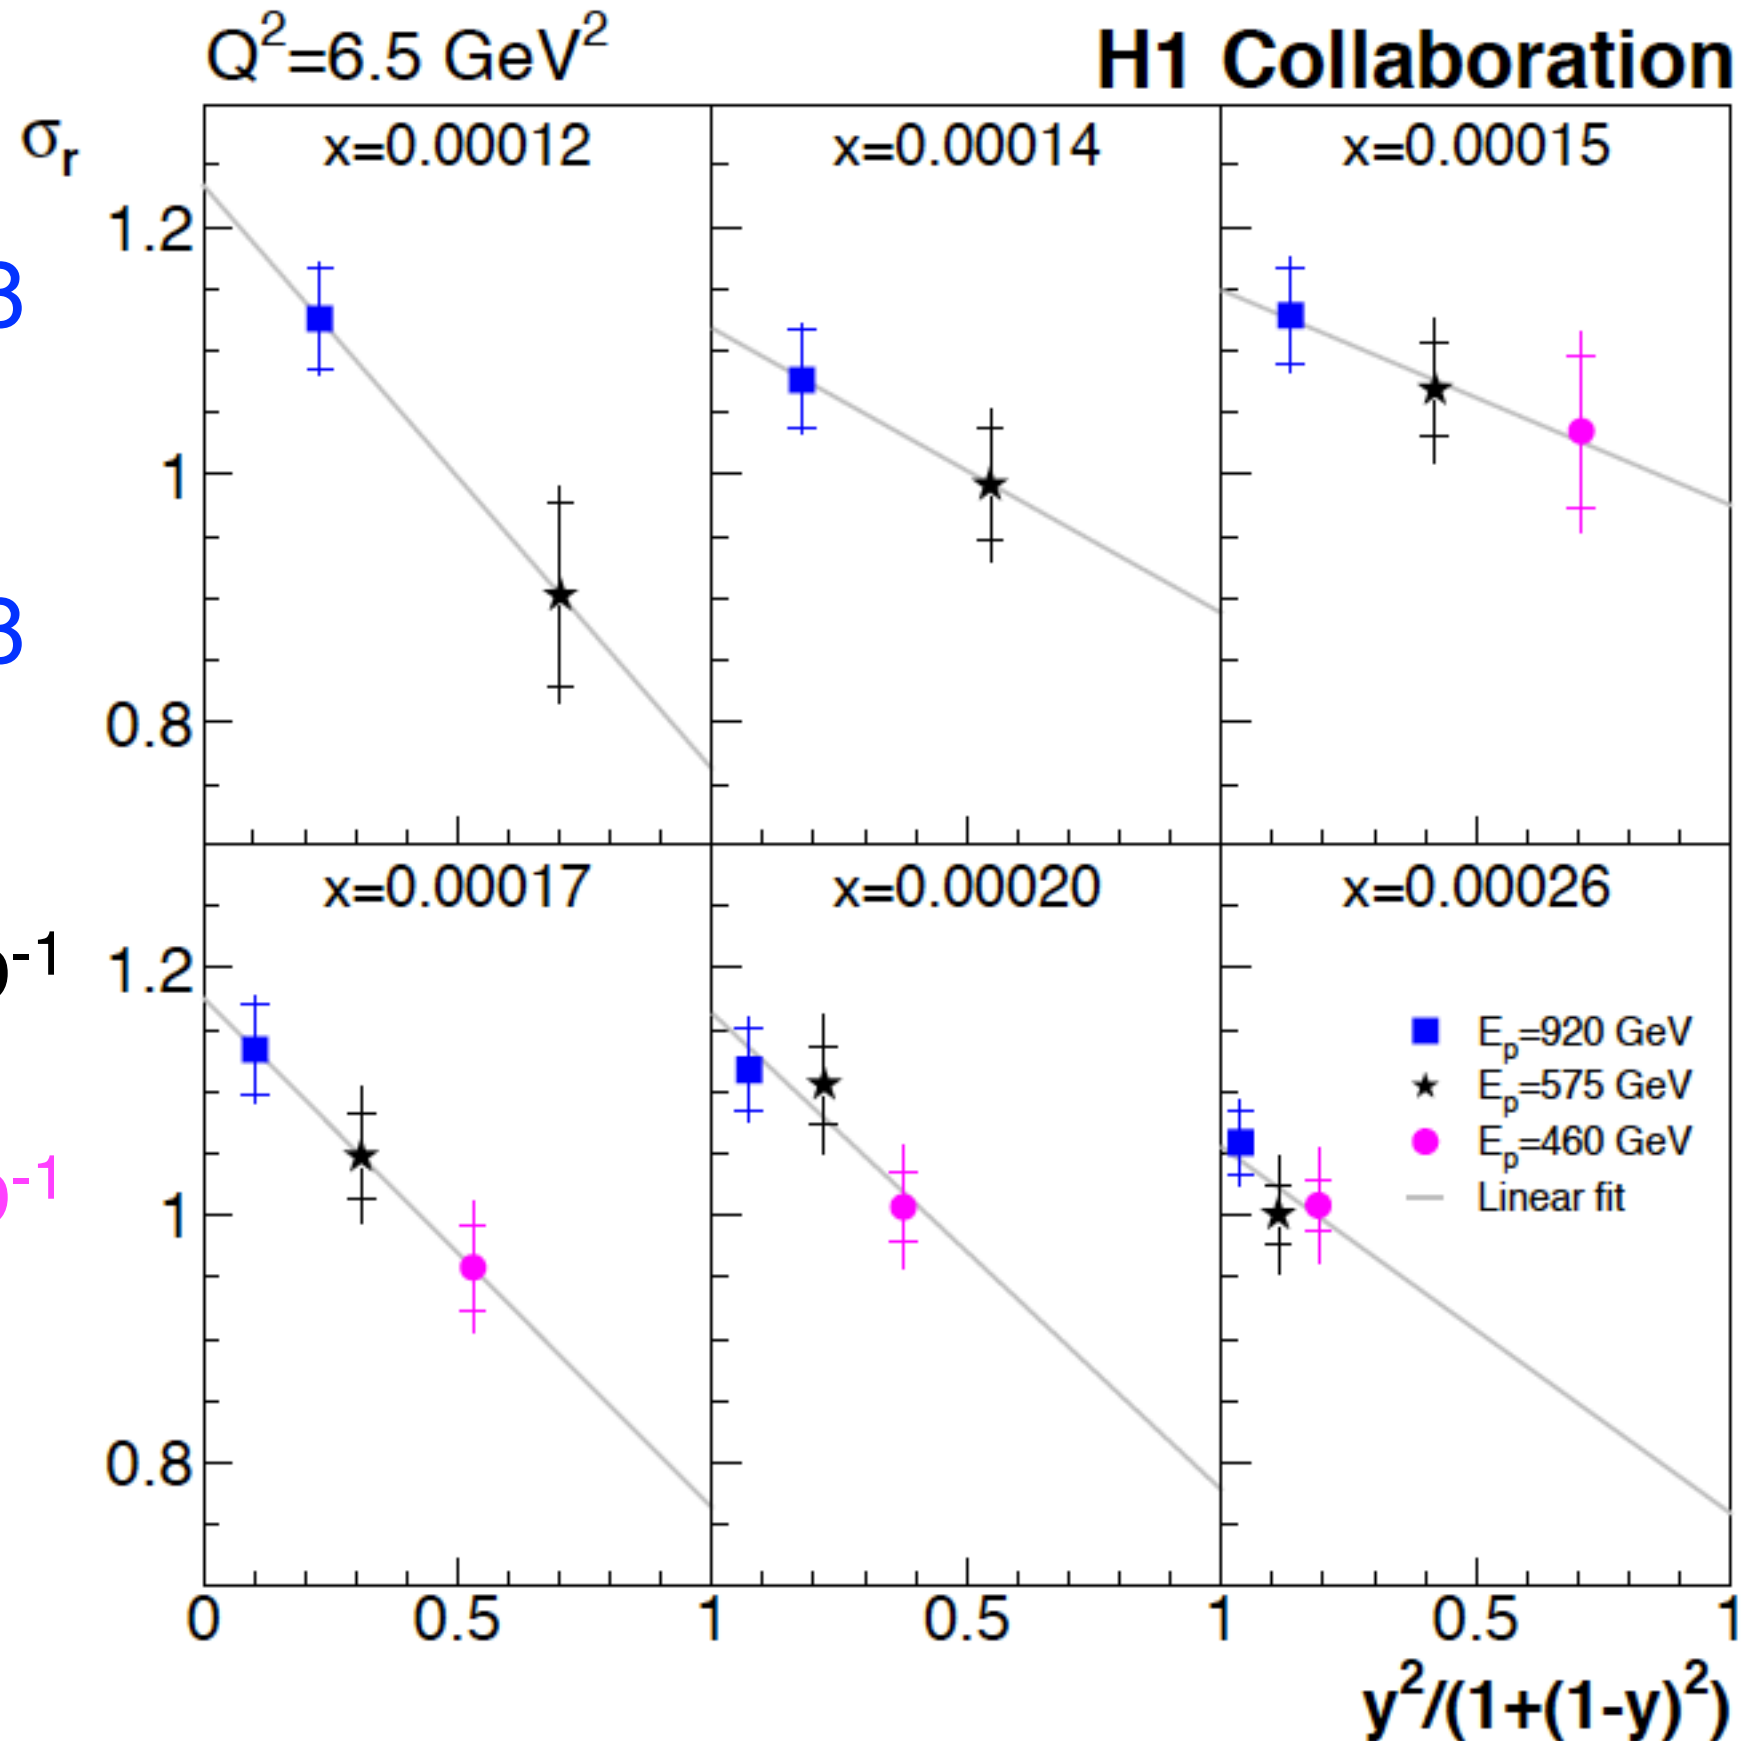

F_L in HERA

$E_p = 920 \text{ GeV}$ ($Q^2 > 8 \text{ GeV}^2$): 97 pb^{-1}

$E_p = 920 \text{ GeV}$ ($Q^2 < 8 \text{ GeV}^2$): 5.9 pb^{-1}

$E_p = 575 \text{ GeV}$: 4.9 pb^{-1}

$E_p = 46 \text{ GeV}$: 12.2 pb^{-1}

$1 < Q^2 < 1.778$: Reduced Cross-sections e+Au: $\int L dt = 10 \text{ fb}^{-1}$

1.778 < Q² < 3.162: Reduced Cross-sections e+Au: $\int L dt = 10 \text{ fb}^{-1}$

3.162 < Q² < 5.623: Reduced Cross-sections e+Au: ∫Ldt = 10 fb⁻¹

5.623 < Q² < 10: Reduced Cross-sections e+Au: ∫Ldt = 10 fb⁻¹

5.623 < Q² < 10: Reduced Cross-sections e+Au: ∫Ldt = 10 fb⁻¹

To go lower in x , need to go to higher energy (20 GeV e^- beams)

Extracted F_2 and F_L : $A\int L dt = 10 \text{ fb}^{-1}$

$1 < Q^2 < 1.778$: Reduced Cross-sections e+Au: $\int L dt = 10 \text{ fb}^{-1}$

1.778 < Q² < 3.162: Reduced Cross-sections e+Au: ∫Ldt = 10

3.162 < Q² < 5.623: Reduced Cross-sections e+Au: ∫Ldt = 10

5.623 < Q² < 10: Reduced Cross-sections e+Au: ∫Ldt = 10 fb⁻¹

5.623 < Q² < 10: Reduced Cross-sections e+Au: ∫Ldt = 10 fb⁻¹

Summary and conclusions

- Bug fixed!
- F_2 and F_L calculation is NOT luminosity dependent!
- Systematic uncertainties drive the measurement
 - Need to be understood as well as possible
- Acceptance (and hence beam energy) is crucial for getting into a regime where we can have x and Q^2 dependence of F_2 , F_L .
