

# TOF Calibration & Software Progress

Xin Dong

for TOF Group

## Calibration Status

- 62GeV results
- 200GeV

## TOF Offline software

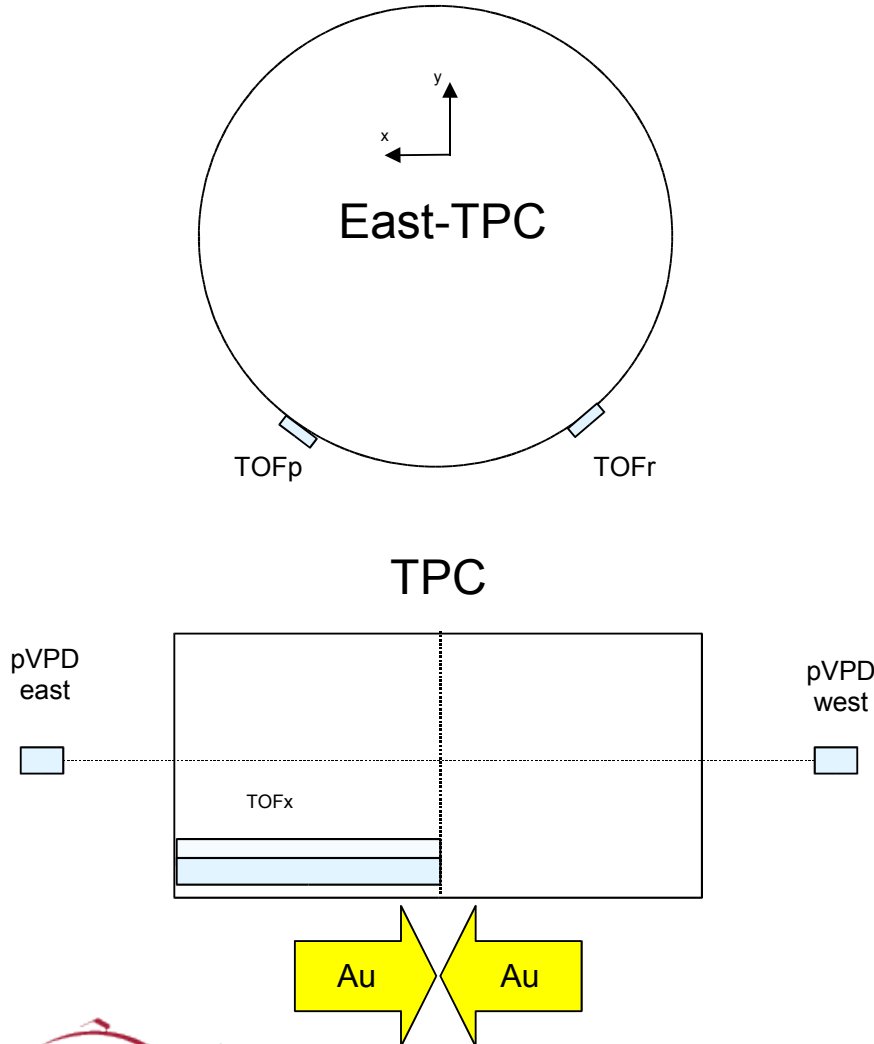

- Data base
- Makers
  - match
  - calibration
  - MuDst

Where are we & usage of TOF?

# TOF detectors in Run IV

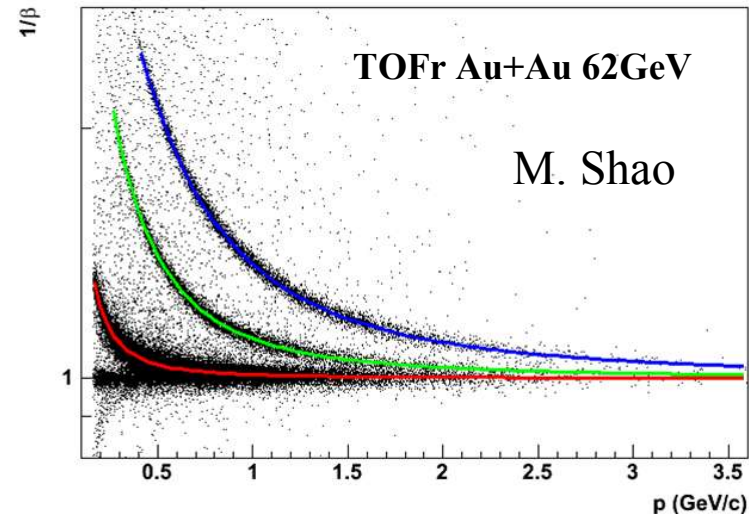

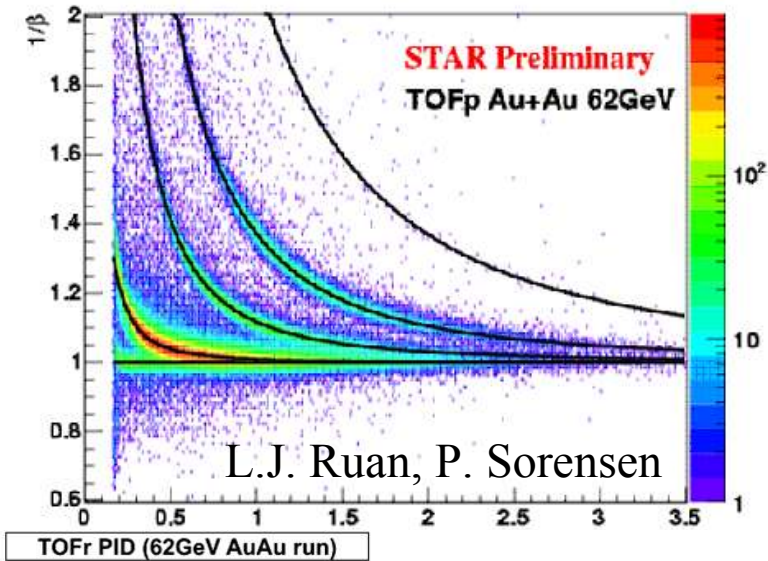

## Some changes this year:

- pVPDs moved  $\sim 4''$  further from  $Z=0$
- TOFp moved one slot clockwise when facing west from the east side
  - read out channels no change (41)
- TOFr did not move, but the tray size and module positions in the tray changed
  - First 20 modules (out of 32) in the tray have read-out electronics (72+48 channels totally)

# TOF in 62GeV AuAu run

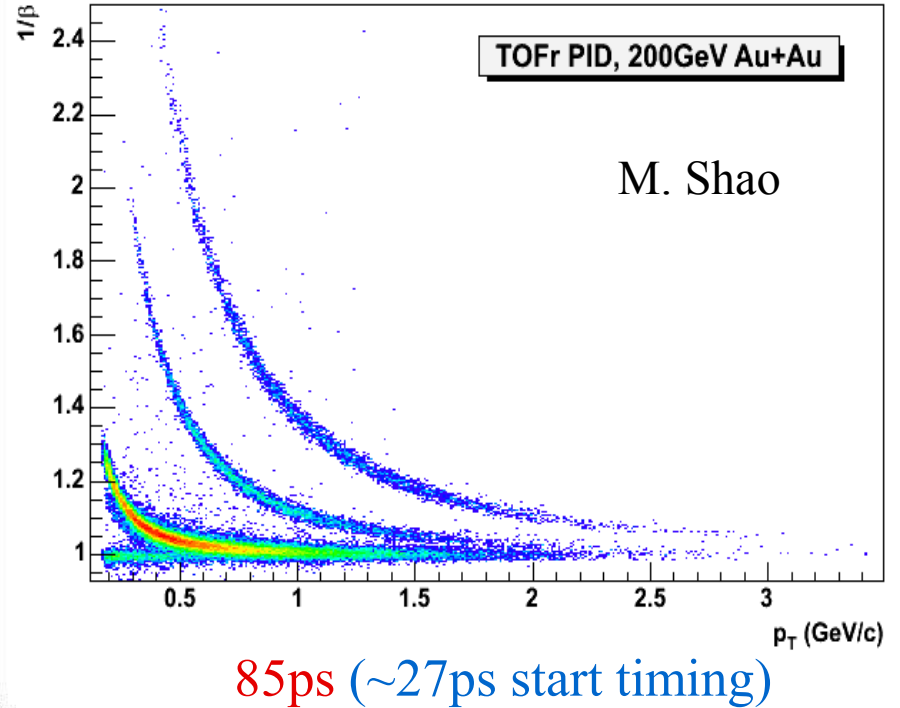

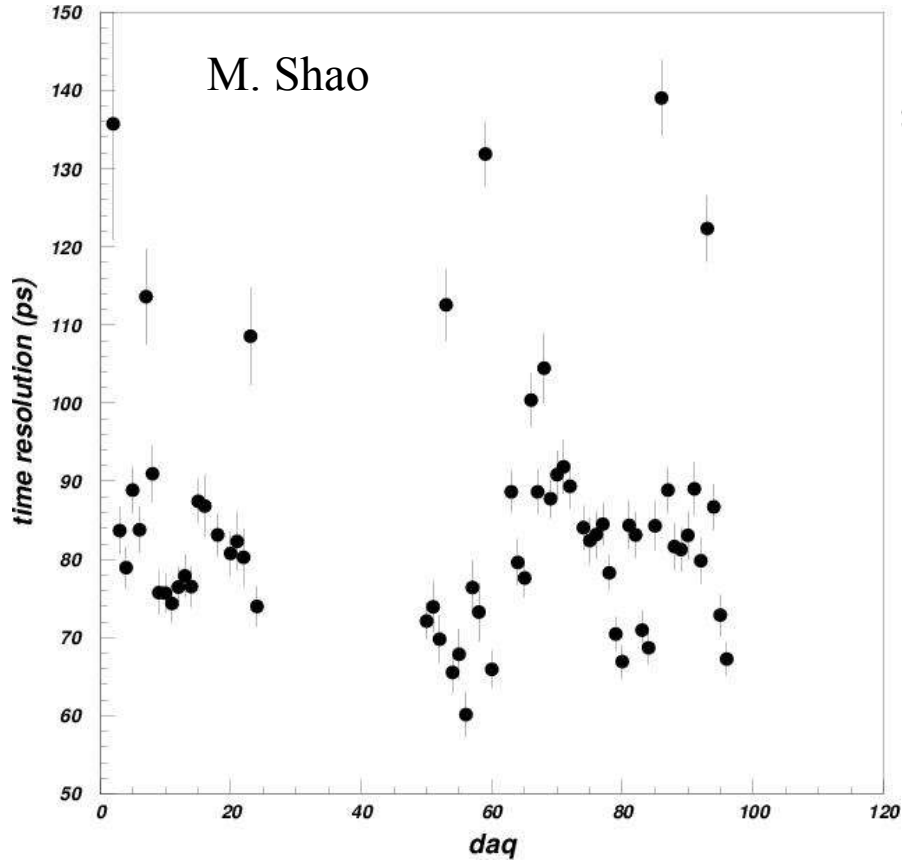

~110ps resolution in both TOFr  
& TOFp systems.  
(~55ps starting timing resolution)

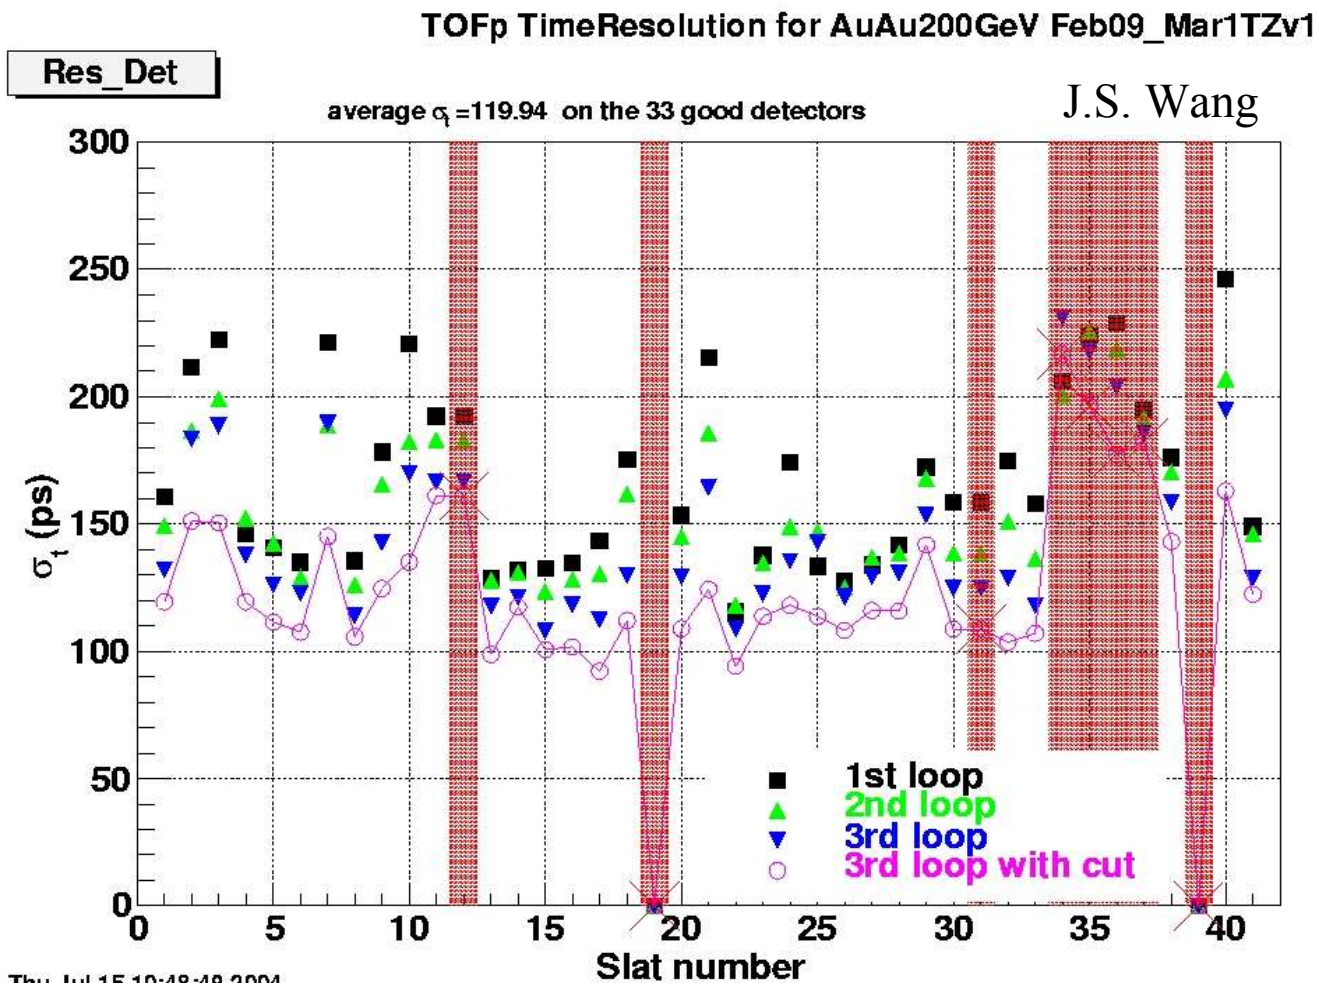

# 200GeV AuAu calibration --- TOFr

# AuAu 200 GeV calibration --- TOFp

Thu Jul 15 10:48:49 2004

# TOF detectors performance

		Timing Resolution (ps)			
		pPVDs	TOFr system	TOFp system	
<b>Run III</b>	d+Au @ 200GeV	85	120 (85)	100-140	
	p+p @ 200GeV	140	160 (85)	-	
<b>Run IV</b>	Au+Au @ 62GeV		55	105 (89)	110 (95)
	Au+Au @ 200GeV	FF&RFF, w/o E pVPD	40	95 (86)	147 (134)
		FF&RFF	27	86 (82)	120-130 (117)
		HF	20	82 (80)	137 (135)

# TOF dbase

## Data Base

Many new introduced structures

- TOF configurations --- ready
  - *pVPD configuration*
  - *pVPD Strobe events configuration*
  - *tof detectors configuration*
  - *tof Tray configuration*
  - *tof Module configuration*
- DAQ mapping --- ready
  - *tof DAQ mapping*

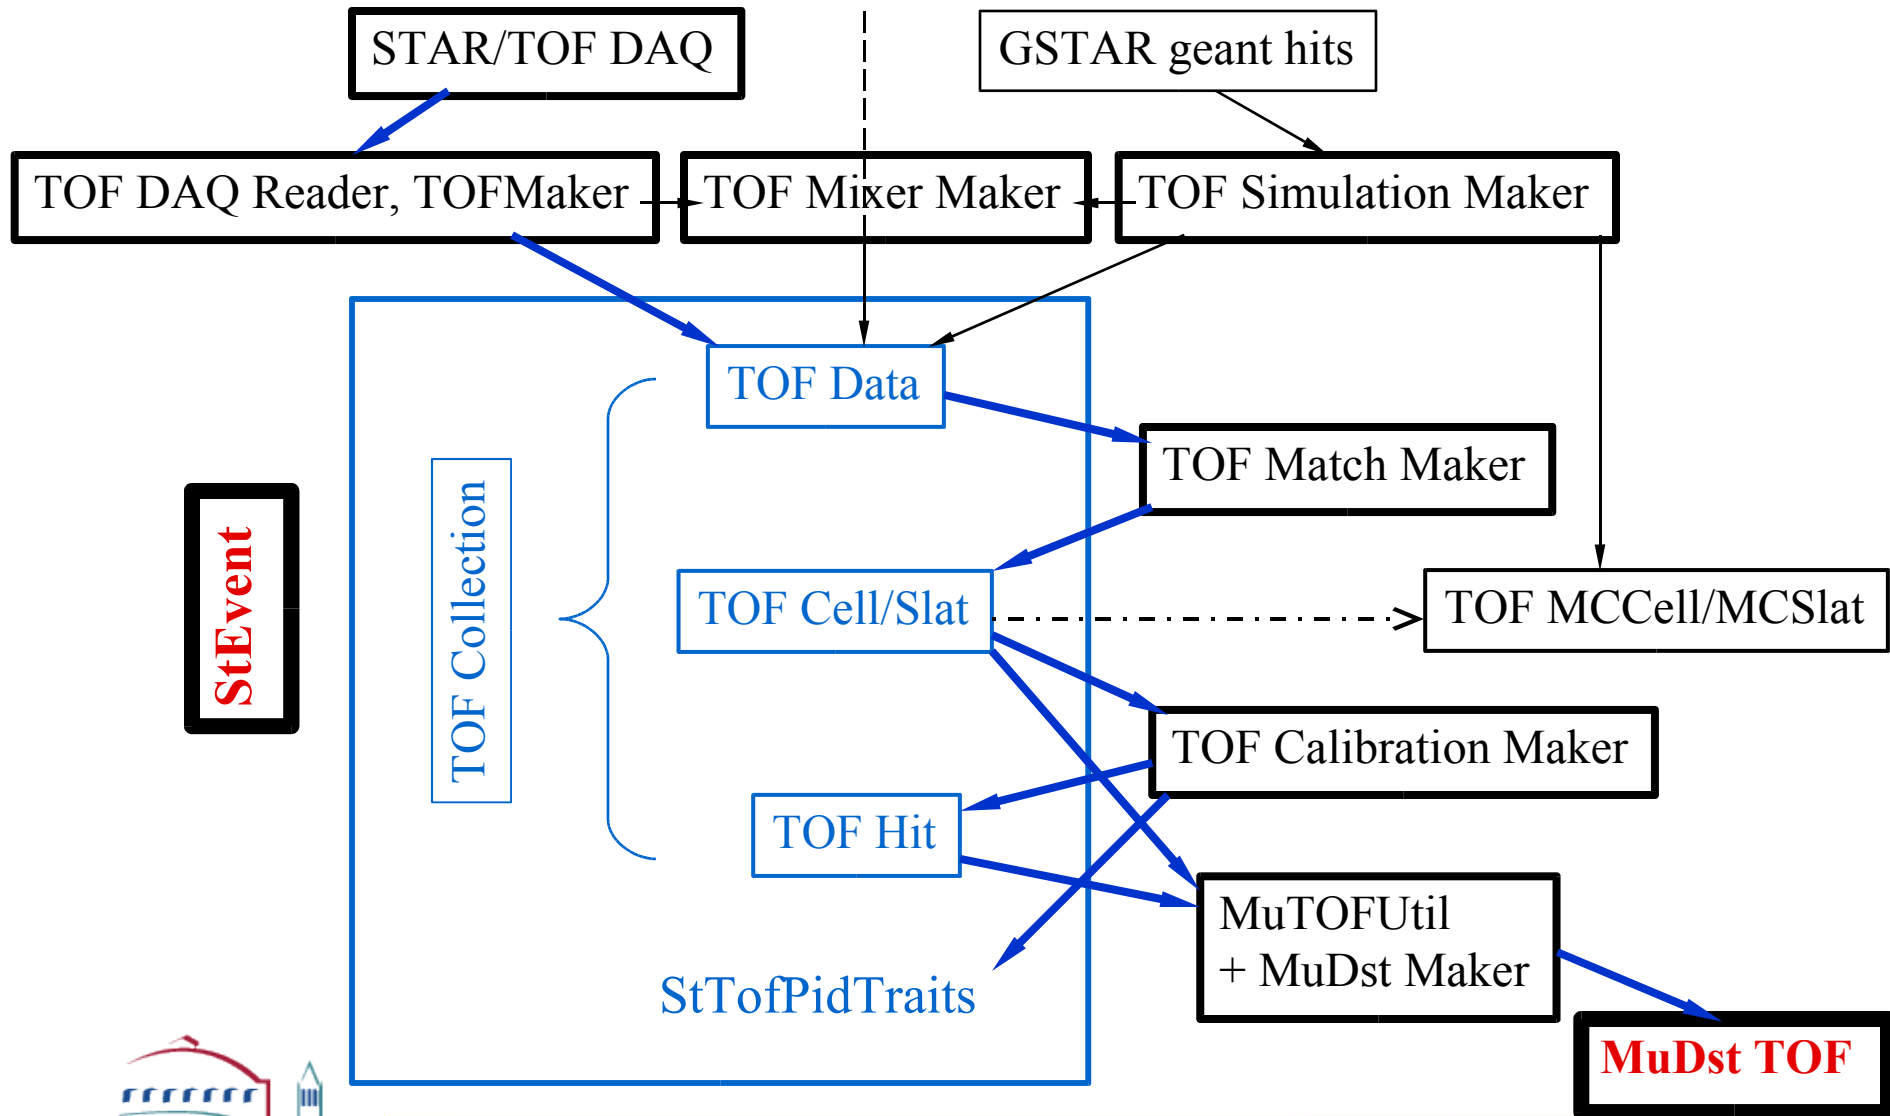

- Calibration parameters --- ready
  - *tof T0 (timing offset)*
  - *tof Correction (overall)*
  - *tof Correction (each channel)*
- Timing resolution --- ready
- Simulation parameters --- ready
  - *MRPC simulation parameters*
- TOFp Geometry

Calibrations for AuAu 200GeV are done, (M. Shao, J.S. Wang et al.)  
-- parameters have been put into dbase  
➔ Ready for the production !

# TOF Offline Software

# Where are we?

**Ready!**

→ Waiting for the production!

MuDst structure:

MuEvent

MuTracks (primary)

MuGlobalTracks

....

V0

....

→ MuTofHit (calibrated physical variables)

→ MuTofData ( raw Tof Data for large scale calibration )

....

# Usage of TOF

In StEvent:

StTrack -> StTofPidTraits -> tof, beta, nSigmaE (Pi, K, P), etc.

In MuDst

If there is no update on the StMuTrack

```
for ( primary tracks ... ) {  
    StMuTrack *trk = ....  
    short trkId = trk->trkId();  
    ....  
    for ( tofhits ) {  
        StMuTofHit *tofhit = ...  
        if (tofhit->associatedTrackId()==trkId) {  
            ....  
        }  
    } // end tof hit loop  
} // end track loop
```

# Many Thanks

## To software group

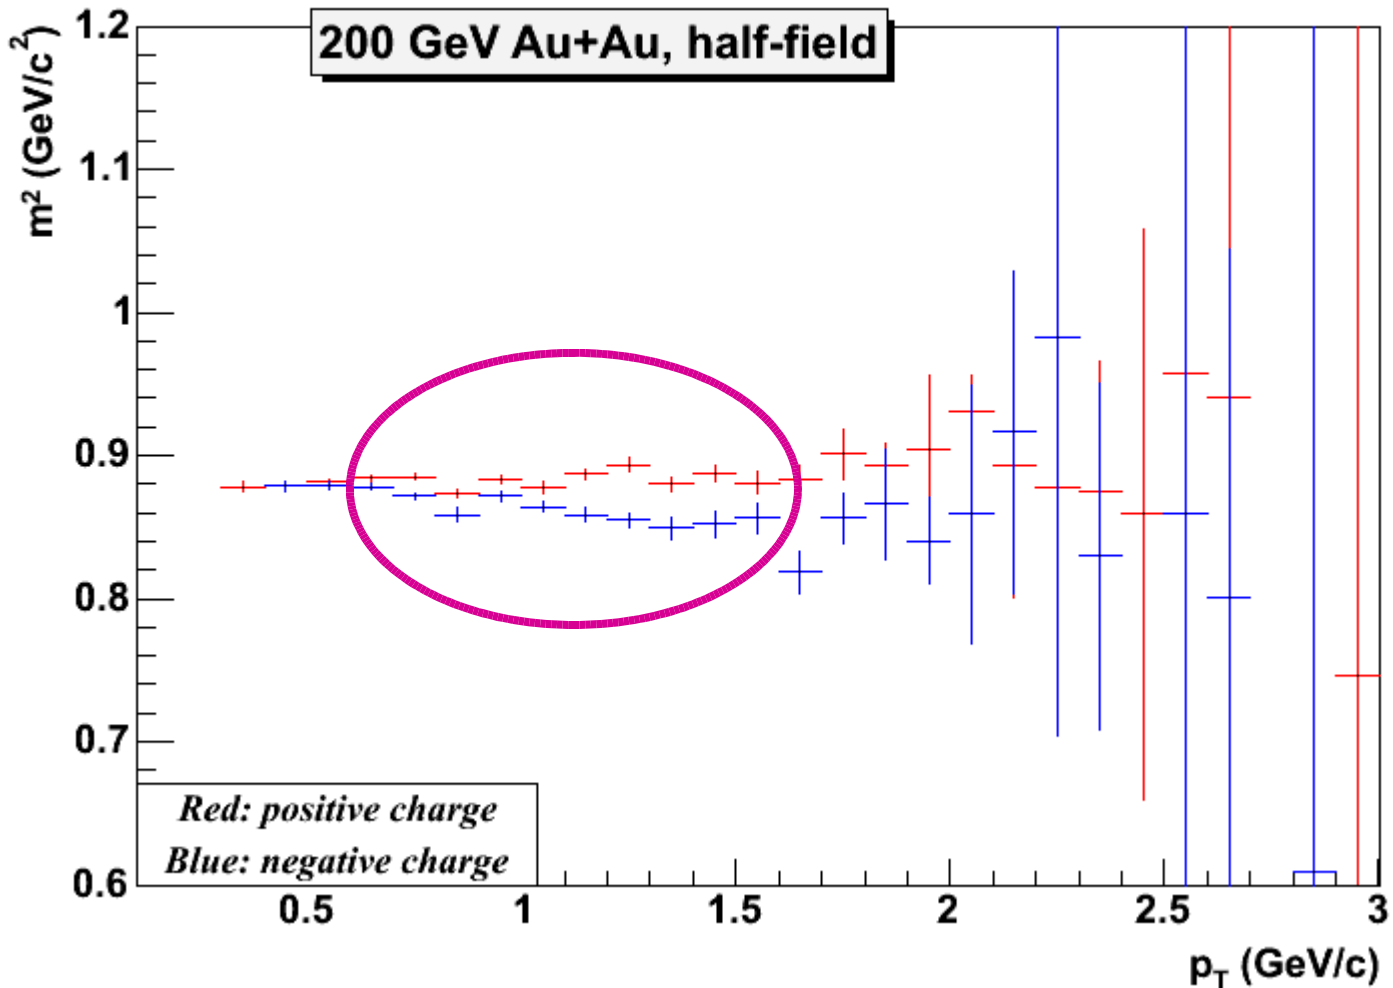

# backup

---

tofr match eff. ( 62 GeV AuAu )

## **AuAu 200GeV calibration Data Set**

STAR run4 200 GeV Au+Au collision

Test production : /star/data45/, /star/data36/, /star/data46/  
(new)

~500k events with primary vertex

~480k pVPD fired events, ~94% of them all 6 channels fired

~300k TOFr matched tracks out of ~250k matched events

run# 22-28: ~25k matched tracks

28-35: ~35k matched tracks

57-62 ( half field ): ~45k matched tracks

39-56 and 63-83: ~200k matched tracks

before run# 22 no TOFr data (detector off)
