Summary from Summer 2000 AuAu Run

Physics input into the Last DSM board was as follows:

- CTB multiplicity > low threshold
- CTB multiplicity > medium threshold
- CTB multiplicity > high threshold
- ZDC East > threshold
- ZDC West > threshold
- Blue ring bucket filled
- Yellow ring bucket filled

The following triggers were defined:

Minimum Bias

- ZDC East and ZDC West set to lower edge of single neutron peak
- Required coincidence between ZDC East and ZDC West

Central

- CTB Highest threshold set to upper 15%
- Required Minimum bias + CTB multiplicity over threshold
- Required CTB multiplicity over threshold

Peripheral

- Require Blue and Yellow bunches
- CTB multiplicity > low threshold only
- Level 3 tracking required track through vertex
